

No rich country, community, or household is energy poor

Renewable energy enables countries to ‘leapfrog’ to new models for powering communities and economies

Traditional

Fossil fuel + coal-based energy

Centralized infrastructure

Zero-sum on climate and development

Distributed, green, & inclusive

Climate-smart and clean fuels

Distributed, digitally-enabled infrastructure

Win-win for a global energy transition

Solar Wind Hydro Biogas

10KW → 100MW

Mini-Grids
Decentralized & grid connected

Enterprise Appliances
for productive use

Commercial & Industrial
Enterprise clusters and markets

Grid-Based Solutions
Distributed storage & generation

Role of philanthropy: Catalyzing a massive market transformation to reach 1Bn people by 2030
