

# CLEAN ENERGY FUND OF TEXAS

*Your trusted financial partner to grow the clean energy economy*

Save Money. Save Energy. Grow the green economy.

**U.S. Department of Energy  
Loan Program Office**

**January 7, 2023**

## Our Mission

We make clean energy affordable for all Texans.

- Mitigate the climate crisis
- Eliminate energy poverty
- Create green jobs
- Catalyze economic development in under-resourced communities

We accelerate the flow of green capital into underserved markets to provide all Texans a healthier, prosperous and just future.

## Reducing the Energy Burden for Texans

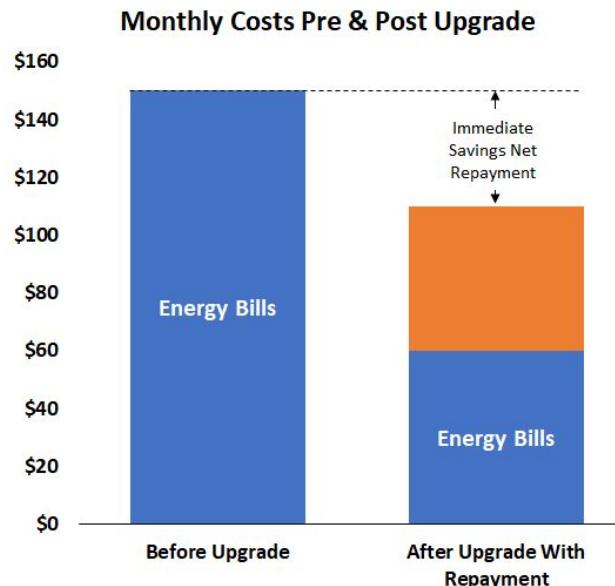

**41%** of Texas households (3.8 million households) qualify as low-income

**6→15%** the percentage of these households' total income spent on energy

**6%** beyond the recommended by the U.S. Department of Housing and Urban Development

## Energy Justice is Economic Justice

Access to capital is a major barrier to eradicating energy burdens.

Cost-effective efficiency improvements, such as insulation and more efficient lighting and appliances, in low-income households can reduce electricity consumption by 13% to 31%. These measures reduce a household's energy costs, freeing up money for other vital budget items.

Crowd-investing platforms can facilitate wealth creation for LMI households through equity investments in green infrastructure.

## Greenhouse Gas Reduction Fund

The Fund is a \$27 billion program within the Inflation Reduction Act of 2022.

Supports the rapid deployment of low - and zero-emission technologies, with the majority of funding dedicated to supporting projects that reduce GHG and other air pollution in low -income and disadvantaged communities.

EPA will make awards by late September of next year.
