## Acknowledgments

Many individuals and agencies shared insights, experiences, knowledge and data that contributed to this report. Researchers at the Ray Marshall Center express their gratitude to everyone who has helped to complete or has contributed to this phase of the project.

Without the financial resources provided by three main funders, Greater Austin Chamber of Commerce (GACC), the Texas Education Agency (TEA), and TG, this phase of the research could not have come to fruition. The project would not have progressed without the enthusiastic contributions of the six participating school districts -Austin, Del Valle, Leander, Manor, Pflugerville and Round Rock. District leaders committing to this project included Pat Forgione of Austin ISD, Bernard Blanchard of Del Valle ISD, Tom Glenn of Leander ISD, Mark Diaz of Manor ISD, Patricia Pickles of Pflugerville ISD and Jesús Chávez of Round Rock ISD. Several district staff members who assisted us with background information and student contact data deserve special mention, including Holly Williams, Lisa Schmitt and Cathy Malerba of Austin ISD; Sandra Dowdy of Del Valle ISD; Camille Clay of Leander ISD; Andrew Kim of Manor ISD; Debra Utley and Terrence Eaton of Pflugerville ISD; and Gary Madsen of Round Rock ISD.

The authors thank Chris King and Tara Smith from the Ray Marshall Center, Hannah Gourgey of E3 Alliance and David Wilkinson from Skillpoint Alliance who assisted with this project. They examined elements of the survey results, provided direction and support in determining the most important items for analysis and aided in reading the draft document and providing comments on content and/or format. Finally, we must express our thanks to a number of Ray Marshall Center staff members who assisted with the final production of this report. Daniel Schroeder, Elizabeth McCain, and Natasha Khemani verified the accuracy of both programming and statistical outputs. Nancy Ngo, our undergraduate research assistant, with astounding accuracy, efficiency and speed, transferred various forms of written student information into electronic format for analysis, and Susie Riley expertly formatted this report for final publication.

## Executive Summary

Globalization, technological innovation and the ongoing restructuring of work have created a need for well-educated and trained workers in the U.S. and locally. According to the Texas Higher Education Coordinating Board's (THECB) postsecondary education plan, Closing the Gaps by 2015, the Austin region must find a way to add 50,000 more college graduates by that time in order not to lose its competitive edge to other regions in this country and the world. This economic need is occurring simultaneously with demographic shifts in which Central Texas minority populations, who have historically attended college at low rates, are growing rapidly. Thus, it is essential to identify those policies and practices that would enable Central Texas residents to acquire the education needed to meet the region's workforce and economic development needs.

## Central Texas High School Graduate Data Center Overview

The Central Texas High School Graduate Data Center (Data Center) is a research partnership between the Ray Marshall Center, Skillpoint Alliance and a growing number of Central Texas independent school districts (ISDs). The Data Center has begun to follow the progress of Central Texas graduates as they make the critical transition from high school to postsecondary education, the labor market and the military, as well as less desired outcomes such as welfare and corrections. The Data Center's purpose is two-fold:

- To provide Central Texas school districts, postsecondary institutions, and employers with comprehensive, longitudinal research on what local high school graduates are doing after high school, why they are making these decisions, and how a variety of educational, personal and financial factors are related to graduates' success in higher education and the workforce; and
- To foster best practices through workshops, seminars, and applied research, assisting the region's ISDs, Education Service Center, and postsecondary institutions to increase the number of regional graduates who obtain postsecondary academic and workforce credentials.

As defined in this project, Central Texas comprises Travis, Williamson and Hays counties and includes 22 school districts with headquarters in these counties. The 2005 American Community Survey estimates that 7\%-17\% of children in these counties lived in
poverty ( $17 \%, 7 \%$ and $10 \%$, respectively). According to these estimates, Hispanics made up $32 \%$ of the Travis County population, $20 \%$ of Williamson, and $32 \%$ of Hays. Both of these groups are significantly underrepresented in the current postsecondary education system and Hispanics are the fastest growing segment of the Texas population. Texas Education Agency (TEA) records indicate that 229,114 students were enrolled in the three-county area in 2006, including all elementary and secondary schools.

## Major Research Questions and Expected Results

In each year of this study, the Data Center plans to answer the following major research questions for the region's high school graduates:

1. Which graduates are participating in postsecondary education and why?
2. Which graduates are going to work and why?
3. Which graduates are both working and participating in postsecondary education?

The first two questions constitute the study's primary focus and will be analyzed for Central Texas graduates as a whole and for key population groups of graduates. To determine both what young adults plan to do after high school and key influences on these outcomes, the Data Center surveys students just before they graduate from high school and again one year following their graduation. Students' educational and labor force progress will be followed for four years after high school graduation, using both survey and studentlevel administrative data files. Statistical analysis of the resulting data will identify those background factors and educational practices that are associated with positive education and labor force outcomes. Findings will be shared annually with business leaders committed to supporting local education initiatives and with local educators so that they can use this information to improve their educational practices for future cohorts of high school students.

## Cycle Two Activities and Contents of This Report

During the second research and dissemination cycle (January 2006 through September 2007), the Data Center surveyed 2006 seniors prior to their graduation to gather information about their family backgrounds, high school activities, and plans and preparation for life after high school, information that is not available from their school records. There
were three versions of the survey: online and paper versions created by researchers with the Data Center and completed by students in Del Valle, Manor, Leander, Pflugerville, and Round Rock ISDs, and a separate version created by Austin ISD, an Exit Survey the district has administered for several years in its schools. This report summarizes the survey responses of seniors who completed the senior surveys in the spring of 2006.

Researchers also collected historical student records from participating school districts, as well as postsecondary enrollment and workforce participation data through the fall of 2007. The Data Center is combining data from all of these sources to create a longitudinal research data set and developing preliminary statistical models to identify those background and school variables related to students' initial enrollment in postsecondary education and participation in the workforce. A forthcoming report, targeted for release in the summer of 2007, will provide a first look at students' initial entry into postsecondary education and employment after high school graduation and factors related to successful transitions.

## Summary of Findings from the 2006 Survey of High School Seniors

Over 5,000 seniors in the Austin, Del Valle, Leander, Manor, Pflugerville and Round Rock ISDs responded to the surveys ( $57 \%$ of all seniors). Slightly more female than male students responded to the surveys. Nearly half of all respondents were White, $35 \%$ were Hispanic and $12 \%$ were Black, with the remainder divided among other race/ethnic groups. Nearly three of every ten respondents came from low-income families, and $37 \%$ attended high schools in which at least $40 \%$ of students were from low-income families. ${ }^{1}$ Over $80 \%$ of all respondents expected to attend college or technical school within one year of graduation.

In general, the demographic characteristics of survey respondents reflect those of the senior classes from which they were drawn. Exceptions are noted in the text. Across all districts, the pool of total survey respondents includes slightly more Hispanic and lowincome students and fewer White and Asian students than expected. This is due to a higher overall survey response rate ( $81 \%$ ) by Austin ISD seniors than in other school districts and that school district's higher share of Hispanic and low-income students.

Survey responses for the major survey categories were analyzed both for all respondents and for selected population groups of interest. Survey responses were examined for the following groups: students planning further education within one year of graduation; first-generation students ${ }^{2}$; low-income students; students attending low-income schools ${ }^{3}$; and students by race/ethnicity and gender. Differences by ISD are generally not discussed in the text because those responses typically reflect the different demographic composition of each district. Responses from Del Valle ISD were not included in the detailed analysis due to technical problems that resulted in a very small share of those students completing the survey. Other survey limitations are discussed in the report.

Selected findings in the key topics covered by these surveys are summarized below. All differences discussed among population groups are both large and statistically significant. Other significant differences of smaller magnitudes are mentioned in the report. A report appendix contains complete responses to those survey questions asked in all survey versions.

## Family Background/Influences

- Nearly all parents ( $95 \%$ ) encouraged their children to pursue further education beyond high school. However, differences were found in the extent of parental encouragement among student groups. Specifically, students planning to pursue further education and White students were significantly more likely to say that their parents encouraged them "a great deal." Students not planning to pursue further education, Hispanic students, and first-generation students were more likely to respond that their parents had only "somewhat" encouraged further education.

[^0]- More than three-fourths of seniors reported thinking about college or technical school as a possibility before they entered high school. Among students planning to pursue further education, White, Asian and female students were far more likely to have thought about college as an option "for as long as I can remember." Over half of all low-income students, students attending low-income high schools and first-generation students reported that they did not think about college as an option until middle and/or high school. Black students were more likely to begin thinking about college while in middle school; Hispanic and male students were more likely to begin doing so while in high school.
- When asked about who had been most helpful in applying for college and financial aid, "parents" came up as the most frequently chosen answer. However, first-generation students, low-income students, and students attending low-income high schools cited their parents less often than the groups to which they were compared. White students were more likely to identify parents and/or family members as most helpful than were seniors in other race/ethnic groups. Unlike other groups of students, low-income students stated that school and/or college counselors were most helpful with this process.

## High School Experiences

- Almost all respondents (96\%) participated in non-classroom activities, either those associated with their high schools or non-school-based activities. However, the types of activities varied widely. Specifically, Asian, White and female students, as well as students planning to pursue further education, reported significantly higher rates of participation in community service activities than did first-generation, low-income, Black and Hispanic students. One-fourth of respondents provided routine care to family members; low-income, firstgeneration, Hispanic, Black, and female students were more likely to provide such care.
- Roughly a third of high school seniors did not work during their senior year, another third worked from one to 15 hours per week, and the remainder worked more than 15 hours a week. This pattern holds for all ethnicities except Asian, over half of whom did not work during their senior year. Low-income and firstgeneration students as well as those not planning to pursue further education were the most likely to work more than 15 hours per week.
- Nearly nine out of ten respondents reported studying, with most students studying between one and five hours per week during their senior year. Male students and those students not planning on pursuing higher education were less likely to report any studying, while Asian students studied more than White, Black and Hispanic students.

## Preparation for Life after High School

- Over $80 \%$ of all respondents felt that their high schools had helped them further develop their knowledge and skills in major academic subject areas. Students intending to pursue further education and male students were more likely to give their schools highest ratings in mathematics and science, while low-income students and those attending low-income schools were less likely to report the highest rating in those subjects. Asian students were significantly more likely to rate their schools highly for furthering mathematics skills than students from other race/ethnic groups.
- Nearly $90 \%$ of respondents reported completing at least one college preparation activity. Overall, $55 \%$ of students engaged in four or more college preparation activities; however, students planning to pursue further education and female students were more likely to have completed four or more activities. Female students, students planning further education, White and Asian students were also significantly more likely to complete each of the individual college preparation activities defined in the survey than the groups to which they were compared.
- Over eight of every ten ( $85 \%$ ) respondents reported applying to at least one postsecondary institution, and $67 \%$ applied to 4 -year colleges. Students attending low-income high schools, first-generation, low-income, Black and Hispanic students were all more likely to report applying to a 2 -year college. A majority of reported applicants also reported acceptance as of the date the survey was completed; however, those attending low-income high schools as well as firstgeneration and low-income students were less likely to report acceptance to both 2-year and 4-year colleges. White and Asian students were more likely to report acceptance to a 4-year college than other race/ ethnic groups.
- While over $70 \%$ of respondents said that they might borrow money for college, only $40 \%$ of survey respondents said that they or their parents had completed and submitted a Free Application for Federal Student Aid (FAFSA) in order to qualify for income-based grants and loans. Of students who had applied to at least one educational institution, female students were more likely to have completed a FAFSA and Hispanic students less likely when compared to their counterparts.

## Conclusions and Plans for Future Work

The following conclusions can be drawn from the 2006 senior surveys:

1. The demographic characteristics of survey respondents and their senior classes varied widely.
2. Despite these differences, there was widespread agreement among students in their interest in further education beyond high school.
3. Major differences existed among different types of students in completing the detailed steps (such as taking college entrance exams, applying to colleges, and ordering transcripts) needed to successfully pursue further education. In general, female, White and Asian students were the most likely to participate in the activities needed for future educational success, while low-income and firstgeneration students were least likely to do so.

Readers should remember that responses to these surveys are not linked to students' actual participation in further education, only students' stated plans. In addition, the significant differences observed between any two groups may not remain after using more rigorous statistical techniques that control for a number of variables simultaneously. The final Cycle Two report will link survey data to historical educational records and data showing initial enrollment in postsecondary education and employment. The statistical models used in that report will begin to identify factors related to student success after high school.

## Chapter 1. Project Overview

Globalization, technological innovation and the ongoing restructuring of work have created a need for well-educated and trained workers in the U.S. and locally. According to the Texas Higher Education Coordinating Board's (THECB) postsecondary education plan, Closing the Gaps by 2015, the Austin region must find a way to add 50,000 more college graduates by that time in order not to lose its competitive edge to other regions in this country and the world (THECB, 2000). This economic need is occurring simultaneously with demographic shifts in which Central Texas minority populations, who have historically attended college at low rates, are growing rapidly. Thus, it is essential to identify those policies and practices that would enable Central Texas residents to acquire the education needed to meet the region's workforce and economic development needs.

## Central Texas High School Graduate Data Center Overview

The Central Texas High School Graduate Data Center (Data Center) is a research partnership between the Ray Marshall Center, Skillpoint Alliance and a growing number of Central Texas independent school districts (ISDs). The Data Center has begun to follow the progress of Central Texas graduates as they make the critical transition from high school to postsecondary education, the labor market and the military, as well as less desired outcomes such as welfare and corrections. The Data Center's purpose is two-fold:

- To provide Central Texas school districts, postsecondary institutions, and employers with comprehensive, longitudinal research on what local high school graduates are doing after high school, why they are making these decisions, and how a variety of educational, personal and financial factors are related to graduates' success in higher education and the workforce; and
- To foster best practices through workshops, seminars, and applied research, assisting the region's ISDs, Education Service Center, and postsecondary institutions to increase the number of regional graduates who obtain postsecondary academic and workforce credentials.

As defined in this project, Central Texas comprises Hays, Travis and Williamson counties and includes 22 school districts. ${ }^{4}$ Estimates derived from the 2005 American Community Survey (ACS) show that the median income in these counties is $\$ 43,207$ (Hays),

[^1]$\$ 48,026$ (Travis); and $\$ 62,418$ (Williamson) respectively. The ACS also shows that $17 \%$ of children under 18 in Travis County live in families with incomes below the poverty level, while in Williamson County that number is $7 \%$ and in Hays County $10 \%$. Hispanics constitute approximately $32 \%$ of the population in Travis and Hays counties, and $20 \%$ of the Williamson County population.

According to the Texas Education Agency (TEA), 229,114 students were enrolled in the three-county area in 2006, including all elementary and secondary schools. As will be discussed further in this report, the demographics of students varied greatly between and among school districts in the three counties.

## Major Research Questions and Expected Results

In each year of the study, the Data Center plans to answer the following major research questions for the region's high school graduates:

1. Which graduates are participating in postsecondary education and why?
2. Which graduates are going to work and why?
3. Which graduates are both working and participating in postsecondary education?

The first two questions constitute the study's primary focus and will be analyzed for Central Texas graduates as a whole and for key population groups of graduates. To determine both what young adults plan to do after high school and key influences on these outcomes, the Data Center surveys students just before they graduate from high school and will begin to survey them again one year following their graduation if resources permit. Students' educational and labor force progress will be followed for four years after high school graduation, using both survey and administrative data. Statistical analysis of the resulting data will identify those background factors and educational practices that are associated with positive education and labor force outcomes. Findings will be shared annually with business leaders committed to supporting local education initiatives and with local educators for use in improving practices for future cohorts of high school students.

Key results expected from the Central Texas Data Center include, among others:

- Better understanding of the factors associated with student postsecondary success and failure on the part of policymakers, community and corporate leaders, and, most importantly, school officials, administrators and parents;
- Improved postsecondary education and labor market outcomes over time; and
- Increased engagement of employers and community leaders in local education.

The Data Center's work is organized into a series of research and dissemination cycles that are being phased in over time. Four ISDs -Austin, Del Valle, Pflugerville and Round Rock —participated in the Data Center project in 2005, working with researchers to pilot and test the survey instruments and presentation formats that will be used once all Data Center components are fully implemented. Results from the initial research cycle were reported in the Central Texas High School Graduate Data Center Year One Final Report (Schexnayder et al., 2006), which can be downloaded from the RMC web site: www.utexas.edu/research/cshr/.

## Cycle Two Activities

Two additional districts -Leander and Manor -were added to the project in Cycle Two, which runs from January 2006 through August 2007. Table 1 presents summary characteristics for the six school districts participating in the Data Center project during the second research and dissemination cycle. The student-groups shown in Table 1 were chosen due to their particular interest to our funders. ${ }^{5}$

[^2]Table 1. Characteristics of Participating Schools and Districts

| District | Total Students | Percent Economically Disadvantaged | Percent Hispanic |
| :---: | :---: | :---: | :---: |
| Austin ISD | 81,003 | 60 | 55 |
| Akins HS | 2,351 | 54 | 65 |
| Anderson HS | 2,088 | 18 | 22 |
| Austin HS | 2,150 | 27 | 36 |
| Bowie HS | 2,673 | 8 | 24 |
| Crockett HS | 2,001 | 51 | 56 |

| Round Rock HS | 2,245 | 22 | 23 |
| Stony Point HS | 2,226 | 32 | 29 |
| Westwood HS | 2,522 | 8 | 10 |

* Leander's Vista Ridge High School did not have a graduating class in 2006, and was therefore not included in the study.
Data source: TEA, AEIS 2005-06 District Profiles.

During this research cycle, the Data Center is conducting the following activities:

- Surveying 2006 high school seniors in the six participating school districts prior to their graduation and analyzing results from those surveys;
- Collecting historical student records from the school districts and initial postsecondary enrollment and workforce participation data from agencies that collect these data;
- Combining student-level survey data with data from these administrative sources to create the first comprehensive research data set for Central Texas that can be used for longitudinal analysis;
- Developing an initial statistical model to determine which background and school variables are related to students' initial enrollment in postsecondary education through the fall semester;
- Writing reports that incorporate all phases of research conducted during Cycle Two; and
- Conducting briefings and educational workshops with stakeholders to share results from this analysis.

## Contents and Organization of this Report

This report discusses findings from the senior surveys conducted in the spring of 2006. Chapter 2 provides detailed research questions, and then describes the data set and methods used to analyze survey responses. In Chapter 3, findings from the surveys of high school seniors in participating ISDs are discussed, both for all respondents and for key groups of interest to funders and policy-makers. The fourth and final chapter discusses how these results should be interpreted, draws several conclusions from this analysis and summarizes plans for future Data Center activities. Three appendices provide more detailed descriptions of the research methods and data used in this report; copies of the Data Center survey; and detailed survey responses for questions asked in all six school districts.

## Chapter II. 2006 High School Senior Survey Research Methods and Sample Characteristics

The first annual survey of Central Texas high school seniors was conducted in the spring of 2006 in six participating school districts. ${ }^{6}$ This chapter discusses the purpose of the survey, methods used to administer and analyze the survey, and final results on key survey questions for over 5,000 survey respondents and major demographic subgroups.

## Purpose of the High School Survey and Research Questions Addressed

The annual high school senior survey serves two major purposes:

1. To ask background questions about the students' family backgrounds, lives in high school and plans for further education, as well as additional information that is not contained in administrative databases; and
2. To obtain contact information from the students for future follow-up surveys.

The survey is necessary to start answering the project's research questions because administrative student records do not capture many of the student-level background factors needed to determine why Central Texas high school students make their decisions regarding additional education and training. The major outcome the survey tracks is whether or not the high school graduate is planning to attend college or technical school; however, the survey also asks what the senior is planning to do if not continuing his or her education.

Survey questions include information about many aspects of the Central Texas high school experience and graduates' perceptions of how their experiences both inside and outside of school helped to influence what they do after high school. The survey also identifies the specific ways in which different school districts work to prepare their students for postsecondary education and how useful students felt these activities were. Finally, because the survey collects background demographic information, the results can determine how students' experiences and preparation vary for different population groups within Central Texas high schools.

[^3]
## Research Methods

The administration of the survey took place from late March through May of 2006 in 23 Central Texas high schools in the six participating districts. Three versions of the survey were used: one provided to Austin ISD students, an online version (used by schools in Del Valle, Manor, and Leander, and a paper version (used by schools in Leander, Pflugerville and Round Rock). Austin ISD regularly administers a senior exit survey online or in paper and partnered with the Ray Marshall Center by adding some questions to their survey and modifying the wording of others to better align their survey instrument to the one administered in other districts. Other participating districts were provided the option of either a survey which students could complete online or a paper version of the online survey. Districts made the survey format selection based on the needs of individual high schools in terms of survey timing and computer lab availability. More details about the survey administration are included in Appendix A. A copy of the Data Center survey can be found in Appendix B, while readers interested in the AISD Exit Survey may obtain the full report online at www.austinisd.org/inside/accountability/evaluation.

A few technical limitations impeded the receipt of complete 2006 survey data across all districts in the study. These problems primarily affected the overall survey response rate in Del Valle ISD and the ability to compare the characteristics of survey respondent to nonrespondents in Leander ISD. Both of these problems were corrected prior to the administration of the 2007 senior survey. Also, because the content of the Austin ISD survey differs somewhat from the Data Center survey, a few variables needed to be redefined or omitted when combining results from both surveys. Specific instances are referenced in the report and full details are provided in Appendix A. In future years, Data Center researchers will continue to work with Austin ISD to minimize differences in key survey variables.

In analyzing survey results, the researchers first describe the demographic characteristics of survey respondents and the overall survey response rates for all high schools and districts in the study. They also report on the extent to which survey respondents represent all of the seniors in participating school districts. ${ }^{7}$

[^4]The analysis of survey questions only includes those questions asked on all versions of the survey. Answers are summarized on the three major survey topics -family background and influences, high school experiences and preparation for life after high school -both for all survey respondents and for significant differences by selected groups of students. The student groups for which differences are reported are:

- Students planning further education - students who plan to attend college or technical school within one year after high school graduation
- First-generation students - students reporting that neither of their parents had completed any education beyond high school ${ }^{8}$
- Low-income students - students reporting that their families participate in the Food Stamp, TANF or free/reduced-price school meal programs
- Low-income schools - schools in which at least $40 \%$ of students come from lowincome families. Of the 23 participating high schools, nine meet this definition, with eight schools having low-income student populations of at least $50 \%$.
- Race/ethnicity, and
- Gender.

These student-groups were chosen due after an extensive literature review which can be found in the Central Texas High School Graduate Data Center Year One Final Report (Schexnayder et al., 2006). Certain other groups (in particular, Hispanic and first-generation students) are discussed in more detail because they are of particular interest to our funders.

Survey responses were also tabulated and significant differences tested for each school district. In general, differences by school or school district reflected the demographic make-up of the campuses or districts. Districts whose students come from one demographic group (e.g. large share of first-generation college students) had responses consistent with that category while districts with more diverse student demographics reflected that diversity in their overall pattern of responses. Findings by district will not be noted in the text unless survey responses seem inconsistent with the demographic composition of the school districts. Complete survey responses by school district are included in Appendix C. ${ }^{9}$

[^5]
## Characteristics of Survey Respondents

A total of 5,146 seniors from the Austin, Del Valle, Leander, Manor, Pflugerville and Round Rock ISDs completed the survey during the spring semester prior to graduation. As shown in Table 2, the demographic characteristics of survey respondents were quite varied. Slightly more female (53\%) than male ( $47 \%$ ) students responded to the survey. Nearly half of all respondents were White, $35 \%$ were Hispanic and $12 \%$ were Black, with the remainder divided among other race/ethnic groups. Nearly three of every ten respondents came from low-income families, and $37 \%$ attended low-income high schools.ver $80 \%$ of all respondents expected to attend college or technical school within one year of graduation.

Parent education level was also quite varied among respondents. Four of every ten students said that their mothers hold a high school degree or less. Another $35 \%$ identified their mothers as having a bachelor's degree or more. If they choose to attend college, over $30 \%$ of surveyed students would be the first generation in their families to do so. The difference between the share of students whose mothers have no education beyond high school ( $40 \%$ ) and the number of first-generation students is due to families in which mothers did not have education after high school but fathers did. It is not possible to calculate this statistic for Austin ISD students because their survey did not ask for fathers' educational attainment level. Thus, the share of first-generation students in the sample may be somewhat overstated.

Table 2. Characteristics of Survey Respondents

| Total | Number | Percent |
| :---: | :---: | :---: |
|  | 5,146 | 100\% |
| Ethnicity |  |  |
| Black | 598 | 12\% |
| Asian or Pacific Islander | 228 | 4\% |
| Hispanic, Latino, of Spanish Origin | 1,794 | 35\% |
| White or Caucasian | 2471 | 48\% |
| Other | 27 | 1\% |
| Gender |  |  |
| Female | 2,711 | 53\% |
| Male | 2,434 | 47\% |
| Family Income Status |  |  |
| Low income | 1,513 | 29\% |
| Not low income | 3,603 | 70\% |
| Plans for Further Education |  |  |
| Going to college or technical school | 4,187 | 82\% |
| Not going to college or technical school | 892 | 18\% |
| Mother's Education Level |  |  |
| Not a high school graduate | 733 | 16\% |
| High school graduate | 1,086 | 24\% |
| Vocational/technical, no degree | 368 | 8\% |
| Some college, no degree | 476 | 10\% |
| Associate's degree | 281 | 6\% |
| Bachelor's degree | 1,015 | 22\% |
| Master's, professional degree, or doctorate | 602 | 13\% |
| First Generation* |  |  |
| Yes | 1607 | 31\% |
| No | 3539 | 69\% |
| School Income Status |  |  |
| Low-income | 1,916 | 37\% |
| Not low-income | 3,228 | 63\% |

* Based only on mother's education for Austin ISD respondents.

Much of the literature on student success cites mother's educational attainment level as an important variable in predicting student success. However, because this variable is not reported by school districts to the Texas Education Agency, it is typically not possible to identify the distribution of mothers' educational attainment levels within the demographic categories (e.g., race/ethnicity and economically disadvantaged) that are reported for each school and district. As shown in Figure 1 below, the race/ethnicity categories within our sample often mask considerable differences in the mothers' educational levels of seniors completing the survey.

Figure 1. Mother's Education by Ethnicity

The low-income variable used in many educational studies based on Texas Public Education Information Management System (PEIMS) data also masks the interplay of several underlying demographic characteristics of low-income Texas families - in particular, educational level, ethnicity and family structure. Contrary to other parts of the United States, less than half of low-income children in Texas are headed by single parents while the other half are two-parent (mostly Hispanic) families. ${ }^{10}$ For the students in this study, it is possible to identify which students live in single-parent families only in those districts completing the Data Center survey (i.e., non-AISD students). Using survey data, an analysis of the relationship of that variable to the low-income and ethnicity variables more commonly reported in Texas educational statistics is included in Appendix A.

[^6]
## Response Rates of Districts

As Table 3 indicates, survey responses also varied substantially across participating districts and campuses. These variations were a result of several factors, including: planning and preparation for survey administration at the district and campus level, and timing and logistics of survey administration at the campus level. These issues had a greater impact on survey response rates than whether the survey was offered online or in a paper version.

Across all districts, $57 \%$ of 2006 seniors responded to the survey. Austin ISD high schools measured the largest response rate at $81 \%$. This is largely due to the district's support of its own end-of-year survey that has been administered annually since 2003. Due both to its larger overall size and higher response rate, $69 \%$ of all survey respondents attended an Austin ISD high school (Figure 2). Appendix C-1 provides more details about survey response rates for each high school that participated in the 2006 senior survey.

Table 3. Distribution of Respondents by School and District

|  | Number | Percent of all Survey Respondents | Response Rate |
| :---: | :---: | :---: | :---: |
| District |  |  |  |
| Austin | 3,564 | 69\% | 81\% |
| Del Valle | 19 | <1\% | 8\% |
| Pflugerville | 352 | 7\% | 37\% |
| Round Rock | 415 | 8\% | 19\% |
| Manor | 80 | 2\% | 53\% |
| Leander | 716 | 14\% | 63\% |
| Total | 5146 | 100\% | 57\% |
| High School |  |  |  |
| Akins | 422 | 8\% | 86\% |
| Anderson | 442 | 9\% | 90\% |
| Austin | 389 | 8\% | 87\% |
| Bowie | 521 | 10\% | 90\% |
| Cedar Park | 355 | 7\% | 64\% |
| Crockett | 315 | 6\% | 78\% |
| Del Valle | 19 | <1\% | 8\% |
| Garza | 79 | 2\% | 45\% |
| Hendrickson | 67 | 1\% | 31\% |
| John Connally | 183 | 4\% | 55\% |
| Johnston | 109 | 2\% | 75\% |
| Lanier | 248 | 5\% | 81\% |
| LBJ | 296 | 6\% | 86\% |
| Leander | 361 | 7\% | 62\% |
| Manor | 80 | 2\% | 53\% |
| McCallum | 309 | 6\% | 84\% |
| McNeil | 58 | 1\% | 10\% |
| Pflugerville | 102 | 2\% | 25\% |
| Reagan | 170 | 3\% | 80\% |
| Round Rock | 39 | 1\% | 9\% |
| Stony Point | 221 | 4\% | 33\% |
| Travis | 257 | 5\% | 75\% |
| Westwood | 97 | 2\% | 18\% |

## Figure 2. Composition of Survey Respondents by ISD

## Differences Between Survey Respondents and Non-Respondents in Participating Districts

To determine the degree to which the survey respondents represent the entire population of seniors from which they were drawn, Data Center researchers compared the differences in the means of a set of demographic characteristics between survey respondents and non-respondents in each of the four districts-Austin, Manor, Pflugerville and Round Rock -for which demographic information was available for all 2006 seniors. ${ }^{11}$

In Manor and Pflugerville ISDs, there were no statistically significant differences between survey respondents and non-respondents. In Round Rock ISD, survey respondents were somewhat more likely to be female or Hispanic than those who did not take the survey. ${ }^{12}$ In Austin ISD, survey respondents were slightly younger than non-respondents, and somewhat more likely to be White and less likely to be Black than non-respondents.

[^7]They were also less likely to come from low-income families than students who did not complete the survey. Due to the high overall survey response rate (81\%) for Austin ISD, this discrepancy is likely due to the fact that certain sub-groups of students (e.g., special education students) may have not completed the AISD senior survey. ${ }^{13}$

Data Center researchers also compared the characteristics of all survey respondents against all non-respondents across all four districts that provided demographic information for all seniors. This analysis revealed that the total sample of survey respondents includes significantly higher shares of Hispanic and low-income students than expected and lower shares of White and Asian students. This is the result of the higher survey response rates in Austin ISD (which also has a relatively high share of Hispanic and low-income students) than in the other three districts (which have higher shares of White and Asian students).

Based on these analyses, readers should be aware that the summary statistics presented for all survey respondents in the rest of this report over-represent Austin ISD students. This caution should not affect the analysis of survey responses for individual population groups, which are defined to identify differences in responses across certain types of students enrolled in any school district. Appendix A provides more information on this topic.

[^8]
## Chapter III. Analysis of 2006 Survey Responses

The 2006 senior survey covered three main topics about which information is not typically collected by school districts through their administrative data systems: family background and influences on students' views toward education beyond high school, high school experiences, and preparation for life after high school. The following sections discuss major findings in these three topic areas for the questions that were asked in all versions of the survey. Key findings will be presented for all survey respondents, and statistically significant differences greater than five percentage points will be noted for the following groups of respondents: those planning further education within one year of graduation; firstgeneration students; low-income students; students attending low-income high schools; and students by race/ethnic groups and gender.

Significant differences by school district generally can be explained by the differences in the demographic makeup of students in each district; thus, school district differences will only be discussed if their responses do not follow that general pattern. Complete school district responses can be found in Appendix C.

## Family Background/Influences

Nearly all parents (95\%) of respondents encouraged their children to go to college. However, variations existed in the degree to which seniors reported such parental encouragement, with $78 \%$ of all respondents stating that their parents had encouraged them "a great deal" and another $17 \%$ stating that their parents had "somewhat" encouraged college attendance. These seemingly subtle differences in responses become magnified when examining responses by student subgroups. In general, students planning to pursue further education as well as White students were significantly more likely to say that their parents had encouraged them to go to college "a great deal." As shown in Table 4, students not planning further education, first-generation students and Hispanic students were significantly more likely to respond that their parents had only encouraged them "somewhat" rather than "a great deal."

Table 4. Level of Parental Encouragement

|  | A Great Deal of <br> Encouragement |  |
| :--- | :---: | :---: |
| Somewhat <br> Encouraged |  |  |
| Planning further ed | $82 \%$ | $13 \%$ |
| Not planning further ed | $56 \%$ | $34 \%$ |
| First generation | $69 \%$ | $24 \%$ |
| Not first generation | $82 \%$ | $14 \%$ |
| White | $82 \%$ | $13 \%$ |
| Asian | $82 \%$ | $13 \%$ |
| Hispanic | $73 \%$ | $21 \%$ |
| Black | $74 \%$ | $20 \%$ |

NOTE: This table only includes groups for which differences are statistically significant at or above the . 05 level.

Another measure of families' influence on views toward college attendance concerns when seniors began thinking about postsecondary education. While $41 \%$ of respondents reported thinking about college as an option "for as long as I can remember," a nearly equal share ( $44 \%$ ) did not think about college as an option until middle and/or high school (Figure $3)$.

Figure 3. When Did You Start Thinking About College

Once again, these differences vary greatly by student group. Students planning to pursue further education were much more likely to have thought of college as an option "for as long as I can remember" than was true for students not planning further education. Those respondents were more likely to begin thinking about college in high school. Over half of all low-income students, students attending a low-income high school, and first-generation students responded that they did not think about college as an option until middle and/or high school. Variations also existed by race/ethnicity, with approximately half of both White and Asian students responding "for as long as I can remember." Black students were more likely to begin thinking about college while in middle school, and Hispanic students in high school. Finally, a significantly larger share of female respondents reported "for as long as I can remember" than males, who were more likely to begin thinking about college in high school.

When asked who offered the most help in preparing for college, parents and/or family members were identified most often, with just over one-third (35\%) of respondents choosing that option (Figure 4). However, first-generation, low-income students and students attending low-income high schools were less likely to respond in such a manner than the groups to which they were compared. When examining differences between ethnic groups, White students were more likely to identify parents and/or family members as most helpful than was true for students from other race/ethnic groups. Unlike other student groups, lowincome students stated that school and/or college counselors were most helpful with the college application process.

Figure 4. Who Offered the Most Help in Preparing for College?

## High School Experiences

Nearly all respondents (96\%) reported participating in school-affiliated extracurricular activities. However, the types of activities varied by student subgroup. Students planning further education and female students were more likely to participate in organized music groups (such as band, chorus and/or orchestra) and language-based clubs. Both low-income and first-generation students were less likely to participate in University Interscholastic League (UIL) academic competitions and/or academic clubs than their counterparts. ${ }^{14}$ Asian students were less likely to report participation in any extracurricular activities than students from other race/ethnic groups; however, those Asian students that did participate were more likely to do so in UIL academic competitions and academic clubs.

Most respondents (85\%) also reported participating in non-school-affiliated activities outside of school hours. Once again, the type of activities differed when examining subgroups. Students planning further education and male students were more likely to participate in organized sports activities outside of school while first-generation and lowincome students were less likely to participate in organized sports not affiliated with their schools. As shown in Table 5, Asian, White, female, and college-bound students all reported

[^9]significantly higher levels of participation in community service activities than did firstgeneration, low-income, Black and Hispanic students. Over one-fourth of all survey respondents reported providing routine care to family members; low-income, firstgeneration, Hispanic, Black and female students reported significantly higher rates of family care than student groups to which they were compared.

Table 5. Community Service versus Routine Care for Family Members

|  | Community <br> Service | Family <br> Care |
| :--- | :---: | :---: |
| Pursuing higher education | $48 \%$ | $26 \%$ |
| Not pursuing higher education | $24 \%$ | $30 \%$ |
| First generation | $36 \%$ | $38 \%$ |
| Not first generation | $47 \%$ | $21 \%$ |
| Low income | $35 \%$ | $43 \%$ |
| Not low income | $47 \%$ | $20 \%$ |
| Black | $36 \%$ | $34 \%$ |
| Asian | $60 \%$ | $21 \%$ |
| Hispanic | $34 \%$ | $38 \%$ |
| White | $51 \%$ | $16 \%$ |
| Female | $51 \%$ | $30 \%$ |
| Male | $32 \%$ | $23 \%$ |

NOTE: This table only includes groups for which differences are statistically significant at or above .the .05 level.

Approximately two-thirds of respondents said that they worked during their senior year (Figure 5). Reports of working did not vary significantly across subgroups, except for Asian students who were much less likely (8\%) to work during their senior year. Of those students who reported working, nearly $30 \%$ worked 1-5 hours per week, $18 \%$ worked 11-15 hours per week, and slightly more than half reported working 16 hours or more per week. Low-income and first-generation students were more likely to report 16 or more hours of work per week, as were students not planning to pursue further education.

Figure 5. Hours Worked During Senior Year

Nearly nine out of ten respondents also reported studying, doing research, or completing homework assignments outside of school hours. Of those who reported studying, two thirds of respondents studied 1-5 hours per week and another fourth studied 6-10 hours per week. As displayed in Figure 6, students not planning to pursue further education were more likely $(21 \%)$ to report not studying than students planning to continue their education (10\%). Asian students reported studying more often than White, Black, and Hispanic students. Finally, a significantly larger portion of male students (18\%) reported not studying than female students (6\%).

Figure 6. Respondents Who Reported No Outside Studying

NOTE: This figure only includes groups for which differences are statistically significant at or above .the .05 level.

## Preparation for Life after High School

General views toward academic preparation. Over $80 \%$ of survey respondents felt that their high schools helped them to further develop their knowledge and skills in major academic subject areas, including writing, social studies, math, science, foreign language, and computer technology. However, students across population groups differed in the degree to which they felt that their high schools had further developed their skills. A significantly higher share of students planning to pursue further education rated their high schools "very well to well" for furthering their mathematics and science skills while students not planning further education were more likely to answer "somewhat well" to those questions. Lowincome students and those attending low-income high schools were less likely to say that their schools had furthered their skills "very well or well" in the same subjects. Nearly 70\% of Asian students gave their schools the highest rating for furthering their mathematics skills, which was significantly higher than for students from other race/ethnic groups. Gender differences were seen as well. Male respondents were more likely to rate their schools highly
for furthering their skills in mathematics, science and social studies, while female respondents were more likely to give their schools the highest marks for furthering their writing and foreign language skills.

Specific college preparation activities. Students who were planning further education typically engaged in many activities, both in and out of the classroom, to prepare for these pursuits. College preparation activities encompass completion of advanced coursework at both the high school and college levels, taking college entrance exams, visiting prospective colleges, submitting applications to colleges, and applying for various types of financial aid.

The survey included questions for nine different types of college preparation activities. Nearly $90 \%$ of respondents reported participating in at least one such college preparation activity. Table 6 lists the actual share of respondents who participated in each of these individual activities. As shown there, two-thirds of seniors reported taking college entrance tests (typically SAT or ACT), the most common of all reported activities. Surprisingly, only $56 \%$ of seniors said that they completed at least the Recommended High School Graduation Plan, which is the default curriculum for all Texas high school students. In future reports, this self-report will be compared to students' actual school records, as it is possible that students may not be familiar with the official name of the curriculum that they completed. The activity reported least often was completion of Austin Community College courses while in high school, with only $22 \%$ of students taking advantage of that opportunity.

Table 6: Reported College Preparation Activities

| Activity | \% of <br> Respondents <br> Completing |
| :--- | :---: |
| Took college entrance tests (typically SAT or ACT) | 67 |
| Took PSAT exam | 59 |
| Visited one or more college campuses | 56 |
| Completed Distinguished Achievement or Recommended High <br> School Plan | 56 |
| Completed one or more AP/IB course | 47 |
| Ordered and submitted a transcript to a postsecondary institution | 44 |
| Completed and submitted a FAFSA | 40 |
| Completed and submitted a scholarship application | 34 |
| Completed ACC courses | 22 |

There were large and significant differences among groups both in the number of college preparation activities completed and participation in each activity. Of those students who completed at least one college prep activity, students planning further education and female students were significantly more likely to have engaged in four or more of the listed activities than the groups to which they were compared. First-generation students, lowincome students, and students attending a low-income high school were more likely to have reported completing between one and three of the activities. Furthermore, female students, students planning further education, those with college-educated mothers, White and Asian students were more likely to have completed each of the individual college preparation activities than their counterparts.

Application and acceptance to postsecondary education. Another vital step that students must take to pursue further education is actually to apply to colleges, business/technical school or other educational entities. Over three-fourths (85\%) of all respondents submitted at least one application to some type of postsecondary institution. As Figure 7 illustrates, some students applied to more than one type of postsecondary institution ( $45 \%$ to 2 -year colleges, $67 \%$ to 4 -year colleges, and $12 \%$ to business, technical or trade school). Low-income students, those attending a low-income high school, first-generation students, Black and Hispanic students were more likely to report applying to a 2-year college than other respondents; similar patterns, but with smaller differences, were found for applications to business, technical, or vocational schools.

Figure 7: Rates of Application to Postsecondary Institutions

Type of Institution

Of respondents submitting applications to further their education beyond high school, $84 \%$ reported acceptance into some type of postsecondary institution as of the date they completed the survey. Acceptance rates also varied by type of institution. Of students applying to 4 -year colleges, $81 \%$ were accepted, while $75 \%$ of 2 -year college applicants and $64 \%$ of business/technical school applicants reported acceptance. Acceptance rates varied significantly across population groups. First-generation and low-income applicants, as well as those attending a low-income high school, were less likely to report that they had been accepted to either a 2-year or 4-year college than their counterparts. Additionally, White and Asian applicants were more likely to report acceptance into a 4-year college than Black and Hispanic applicants. Figure 8 displays the acceptance rates of these subgroups to both 2-year and 4-year colleges.

Figure 8. Acceptance to Higher Education

NOTE: This figure only includes groups for which differences are statistically significant at or above .the .05 level.

It is important to note that these acceptance rates only account for those students who knew that they had been accepted at the time they completed the survey. This timing issue may have affected the rates slightly as students applying to 4-year colleges typically do so earlier in the year and may have had more complete information regarding future plans. This topic will be explored further in the outcomes report, which will compare actual college enrollment to student responses to these survey questions.

It is important to note that these acceptance rates only account for those students who knew that they had been accepted at the time they completed the survey. This timing issue may have affected the rates slightly as students applying to 4-year colleges typically do so earlier in the year and may have had more complete information regarding future plans. This topic will be explored further in the outcomes report, which will compare actual college enrollment to student responses to these survey questions

Application for financial aid. Finally, given today's cost of postsecondary education, many students need financial assistance outside of their personal or family resources to pay for further education. Over half of survey respondents said that they would definitely or probably borrow money for college and another $21 \%$ said that they might do so. ${ }^{15}$ However, only $40 \%$ of respondents reporting completing the Free Application for Federal Student Aid (FAFSA), which is typically required by all postsecondary institutions prior to any financial aid awards being granted. Of students who actually applied to some type of postsecondary educational institution, female applicants were more likely to have completed a FAFSA than males, while Hispanic applicants were significantly less likely to have completed a FAFSA than applicants in other race/ethnic groups.

## Summary of Findings from the 2006 Survey of High School Seniors

A total of 5,146 seniors - $57 \%$ of seniors in the Austin, Del Valle, Leander, Manor, Pflugerville and Round Rock ISDs - responded to the survey. Across all districts, total survey respondents slightly over-represent Hispanic and low-income students and underrepresent White and Asian students. The slight over-representation is due to the higher overall survey response rate (81\%) by Austin ISD seniors and that school district's higher share of Hispanic and low-income students.

The findings from the three major topics covered by the senior survey are summarized below:

## Family Background/Influences

- Nearly all parents ( $95 \%$ ) encouraged their children to pursue further education beyond high school. However, differences were found in the extent of parental encouragement among student groups. Specifically, students planning to pursue further education and White students were significantly more likely to say that their parents encouraged them "a great deal." Students not planning to pursue further education, Hispanic students, and first-generation students were more likely to respond that their parents had only "somewhat" encouraged further education

[^10]- More than three-fourths of seniors reported thinking about college or technical school as a possibility before they entered high school. Among students planning to pursue further education, White, Asian and female students were far more likely to have thought about college as an option "for as long as I can remember." Over half of all low-income students, students attending low-income high schools and first-generation students reported that they did not think about college as an option until middle and/or high school. Black students were more likely to begin thinking about college while in middle school; Hispanic and male students were more likely to begin doing so while in high school.
- When asked about who had been most helpful in applying for college and financial aid, "parents" came up as the most frequently chosen answer. However, first-generation students, low-income students, and students attending low-income high schools cited their parents less often than the groups to which they were compared. White students were more likely to identify parents and/or family members as most helpful than were seniors in other race/ethnic groups. Unlike other groups of students, low-income students stated that school and/or college counselors were most helpful with this process.

## High School Experiences

- Almost all respondents (96\%) participated in non-classroom activities, either those associated with their high schools or non-school-based activities. However, the types of activities varied widely. Specifically, Asian, White and female students, as well as students planning to pursue further education, reported significantly higher rates of participation in community service activities than did first-generation, low-income, Black and Hispanic students. One-fourth of respondents provided routine care to family members; low-income, firstgeneration, Hispanic, Black, and female students were more likely to provide such care.
- Roughly a third of high school seniors did not work during their senior year, another third worked from one to 15 hours per week, and the remainder worked more than 15 hours a week. This pattern holds for all ethnicities except Asian, over half of whom did not work during their senior year. Low-income and firstgeneration students as well as those not planning to pursue further education were the most likely to work more than 15 hours per week.
- Nearly nine out of ten respondents reported studying, with most students studying between one and five hours per week during their senior year. Male students and those students not planning on pursuing higher education were less likely to report any studying, while Asian students studied more than White, Black and Hispanic students.

## Preparation for Life after High School

- Over $80 \%$ of all respondents felt that their high schools had helped them further develop their knowledge and skills in major academic subject areas. Students intending to pursue further education and male students were more likely to give their schools highest ratings in mathematics and science, while low-income students and those attending low-income schools were less likely to report the highest rating in those subjects. Asian students were significantly more likely to rate their schools highly for furthering mathematics skills than students from other ethnic groups.
- Nearly $90 \%$ of respondents reported completing at least one college preparation activity. Overall, $55 \%$ of students engaged in four or more college preparation activities; however, students planning to pursue further education and female students were more likely to have completed four or more activities. Female students, students planning further education, White and Asian students were also significantly more likely to complete each of the individual college preparation activities defined in the survey than the groups to which they were compared.
- Over eight of every ten ( $85 \%$ ) respondents reported applying to at least one postsecondary institution, and $67 \%$ applied to 4 -year colleges. Students attending low-income high schools, first-generation, low-income, Black and Hispanic students were all more likely to report applying to a 2 -year college. A majority of reported applicants also reported acceptance as of the date the survey was completed; however, those attending low-income high schools as well as firstgeneration and low-income students were less likely to report acceptance to both 2-year and 4-year colleges. White and Asian students were more likely to report acceptance to a 4-year college.
- While over $70 \%$ of respondents said that they might borrow money for college, only $40 \%$ of survey respondents said that they or their parents had completed and submitted a Free Application for Federal Student Aid (FAFSA) in order to qualify for income-based grants and loans. Of students who had applied to at least one educational institution, female students were more likely to have completed a FAFSA and Hispanic students less likely when compared to their counterparts.

## Chapter IV. Conclusions from 2006 Survey and Plans for Future Work

Except in a few circumstances noted throughout the report, the survey findings discussed in the last chapter generally represent the views of most seniors in five of the six school districts participating in the 2006 survey.

## Conclusions

Several overall conclusions emerge from this work.

1. Survey respondents and the classes from which they were drawn represent a wide range of demographic traits.

Respondents are composed of near equal shares of females and males with all major race/ethnic backgrounds represented. Nearly a third of respondents are classified as coming from low-income families and a slightly larger share attend low-income high schools. Parental education levels also varied significantly.

## 2. Despite these differences in student backgrounds, there was widespread

 agreement in respondents' interest in further education beyond high school.Over $80 \%$ of all respondents not only said they planned to purse further education but also applied to some type of post-secondary institution. Parents of almost all students had encouraged the pursuit of further education to some degree. Nearly all respondents reported both studying in their senior years and participating in some type of activity outside of the classroom.

## 3. Major differences existed among different groups of students in completing

 the detailed steps needed to successfully pursue education beyond high school.Although over $80 \%$ of students intended to pursue further education, large differences were seen when considering who was completing preparation activities needed to ensure both acceptance and further success in post-high school educational activities. In almost all instances, female, White and Asian students were the most likely to complete the necessary activities while low-income and first-generation students were the least likely to do so. Major differences were also observed in both the level of
parental encouragement and when students began thinking about college. Finally, the nature of activities performed outside of the classroom as well as the hours of participation seen varied significantly amongst subgroups.

It is important to remember that this survey report only examines students' own reports and perceptions while still in high school. These findings are not directly linked to any actual outcomes, just students' plans for the future. Finally, the simple differences noted between any two groups may not necessarily stand up to more rigorous statistical techniques that control for a number of variables simultaneously.

## Plans for Future Work

The final Data Center Cycle Two report, to be released in the summer of 2007, will link initial postsecondary and labor market participation data - such as enrollment in postsecondary institutions and employment -to the data obtained in the student survey. Statistical models that incorporate all of these data sources will be developed and analyzed in the final report. That process will include a much more rigorous statistical analysis and may provide further insight as to how these student backgrounds and activities to prepare for life after high school are related to students' actual outcomes.

## Appendix A: Research Activities, Methods, and Future Plans

## Overall Data Center Analysis Plan

In Research Cycle 2, prior administrative data from grades 9-12 was added to the research data set for 2006 graduates in the spring of 2007 , along with postsecondary participation data. Statistical models that incorporate all of these data sources for 2006 graduates are being developed in the spring of 2007. Annual reports in subsequent years of the project will repeat this process for each new graduating class and update the information for 2006 graduates and all following graduating classes through available administrative data sources (and limited use of surveys if needed).

In Research Cycles 3-5 -January 2007 through August 2010 - the Data Center will conduct the following activities on an annual basis:

- Negotiate MOUs with additional ISDs to secure their participation.
- Negotiate/renew data-sharing agreements with agencies to provide for access to electronic administrative databases used to track educational and workforce progress of individual students for up to four years after graduation.
- Conduct in-school surveys of high school seniors in all high schools from participating ISDs just prior to their high school graduation.
- Conduct follow-up surveys of prior-year graduates approximately one year after graduation.
- Expand research and analysis on students' postsecondary education experiences, focusing on enrollment, achievement, retention and completion.
- Provide longitudinal portraits on transitions of each year's high school graduates, identifying factors associated with success.
- Engage policymakers and education stakeholders in the drive toward significant improvements in policy and practice among the region's educational institutions.
- Facilitate continuous improvement through workshops, seminars and related efforts in Central Texas' education systems.
- Serve as a pilot to demonstrate a successful approach for adoption by other Texas regions and communities.
- Secure funding to sustain and support Data Center activities.

Central Texas ISDs that may be invited to join this project in subsequent years include: Georgetown, Hays Consolidated, Eanes, Dripping Springs, Wimberley, Lago Vista, Hutto, Taylor, Liberty Hill, Florence, Coupland, Jerrell, Granger, Thrall, San Marcos Consolidated and Lake Travis. The number of districts invited to participate ultimately will depend upon the availability of funds.

The Data Center will collect and track two different types of data, administrative data and survey data, linked through the use of an individual identifier. The Data Center will assess the importance of high school experiences on whether students go on to college and/or find employment. In addition to tracking the outcomes of the students through administrative databases, the Data Center will survey students to gather data on why these postsecondary choices were made, and why they were successful or not in their transition to adult life after completing high school.

Statistical models are currently being developed using student-reported survey information and data from administrative databases from the districts, state agencies and private institutions. The goal of this analysis will be to identify those variables which are statistically associated with student outcomes, whether they are work, postsecondary education, or a combination of the two. The statistical approach used will be to progress from relatively simple exploratory estimation using logit, probit, and tobit techniques to use of more sophisticated methods which may include hierarchical linear modeling (HLM), event history analysis, and other methods as deemed appropriate after the initial statistical analysis. The level and detail of the analysis will depend upon the availability of administrative data sources and the ability to link information across them. Analysis involving simple exploratory estimation will be completed for the Summer 2007 report.

## Administration and Survey Analysis

## Total Number of Survey Respondents

Students took three versions of the 2006 senior survey; 1,175 sat for the paper version of the survey, 461 took the survey online, and 3,563 students took the AISD-administered survey. For both the paper and the web versions of the survey, students were assigned a random alphanumeric identification code, the primary purpose of which was to provide anonymity for the survey taker, yet also allow for future connection to the student's consent form so as to link survey responses with student administrative records.

An answer sheet not specific to the project was provided for students taking the paper survey; this did not allow multiple-response questions, (e.g. "Who lives in your current household? Check all that apply") to be scanned. Hence, the paper survey consisted of two sets of questions: single-response questions, which were scanned into an Excel database, and multiple-response questions, which were hand-entered into another Excel database. The random alphanumeric identification code was then used to merge the two databases. Those surveys that contained an invalid identification code or a duplicate ID code were removed from the set of surveys, since their multiple-response answers and single-response answers could not be accurately merged; this process removed 33 surveys, leaving 1,142 complete paper surveys.

Each complete paper survey was examined for out-of-bounds responses in which students entered an invalid answer choice. If any single survey contained more than seven of these invalid answer choices out of the 91 , roughly $8 \%$, then that survey was removed; this process resulted in dropping 22 surveys, leaving 1,122 complete surveys. Out of these surveys, an effort was made to determine if any significant conceptual errors occurred within each survey (i.e. a student responding that their yearly income was greater than $\$ 160,000$ and also reporting using food stamps during their senior year) and, if so, how many of these errors any single survey exhibited. No remaining survey contained a large number of these errors; the individual answers in those situations were coded "missing data" as appropriate.

Because the web survey's structure prevented students from providing invalid answers and limited conceptual errors by using skip-logic for the questions, all 461 students who took the
web survey were included in the combined paper and web survey dataset, providing a total of 1,583 surveys.

The Austin Independent School District administered its own senior survey, and 37 of these survey questions were identical to those in the other versions of the survey. AISD staff managed the survey process in their schools and provided Data Center researchers with an electronic data set of student responses to the survey. No conceptual errors were expected or detected when examining their data. Hence, all 3,563-survey responses were included in the final database, providing a total of 5,146 surveys from the Central Texas area for analysis. Only those students who were in the October 2005 PEIMS Snapshot in Austin were included in the survey responses provided to Ray Marshall Center researchers, though reports from Austin ISD about their survey responses include all survey respondents; thus, other publicly available reports from Austin ISD on Austin's survey may vary slightly from those reported in this document. Note that the relatively high response rate from Austin ISD implies that the survey sample over-represents it when compared to the overall population of high school seniors in each of the districts surveyed. Efforts to weight survey responses to account for this difference in representation will occur prior to and be discussed in the outcomes report, which will be produced in the summer of 2007.

## Aligning the surveys

As students took three versions of the survey, and the questions and answer choices for each version varied slightly, some modifications were required to bring the three versions into closer alignment prior to analysis. One type of modification included combining some answer choices from one version so that they more closely resembled another version. For example, when asked, "How well did your high school help you to further develop knowledge and skills in each of the following areas?" students taking the online and paper non-AISD surveys had five answer options (very well, well, somewhat well, not very well, and not at all well). While students taking the Austin survey had three options (very well, somewhat well, or not well). Thus, students who used the five answer choices had their responses combined to more closely align with the three answer choices provided to students taking the Austin version of the senior exit survey.

## Choosing items for analysis

Analysis of survey responses in this report was limited to those questions common to all three versions of the survey. Because the total number of survey respondents is greatly influenced by inclusion of survey information from the largest school district in the region, responses to questions not asked in the Austin senior exit survey but which were asked in the other districts were provided to the districts themselves, rather than being included in this report.

Researchers tested and compared the means between population groups on question responses to determine statistically significant differences. Where the difference between subgroup responses was greater than 5 percent from response of the entire population, researchers highlighted the difference in the analysis.

## Similarity between survey takers and non-respondents

Researchers linked student survey responses to district-provided administrative data on the entire class of students in order to test the means between survey takers and non-survey takers on the categories of age, race, gender, and income status (see Table A-1). ${ }^{16}$ When statistically significant differences between respondents and non-respondents arise, this implies that the survey takers are different from a randomly drawn sample. The basis behind the external validity of the survey is that the sample is random. Despite this limitation, if a large majority of students are surveyed in a district then conclusions drawn on that sample do speak to the majority of students in that district, even though the sample itself may not be random.

[^11]Table A-1: Comparison of Surveyed and Non-Surveyed Populations by District

| Variables (by district) | Percent of <br> Unsurveyed <br> Population | Percent of <br> Surveyed <br> Population | Level of <br> Statistical <br> Significance |
| :--- | :---: | :---: | :---: |
| Austin ISD |  |  |  |
| Age (Mean) | 19 | 18 | $<.0001$ |
| Black | 17 | 12 | $<.0001$ |
| White | 34 | 42 | $<.0001$ |
| Asian | 2 | 3 | $<.10$ |
| Hispanic | 46 | 42 | $<.001$ |
| Females | 46 | 51 | $<.001$ |
| Economically Disadvantaged | 48 | 35 | $<.0001$ |
| Pflugerville ISD | 17 |  |  |
| Age (Mean) | 27 | 17 |  |
| Black | 39 | 29 |  |
| White | 10 | 40 |  |
| Asian | 24 | 8 |  |
| Hispanic | 50 | 23 |  |
| Females | 32 | 50 |  |
| Economically Disadvantaged | 18 |  |  |
| Round Rock ISD | 10 | 18 |  |
| Age (Mean) | 92 |  |  |
| Black | 65 | 65 |  |
| White | 8 | 3 | $<.10$ |
| Asian | 17 | 23 | $<.05$ |
| Hispanic | 51 | 61 | $<.01$ |
| Females | 14 | 19 |  |
| Economically Disadvantaged |  |  |  |
| Manor ISD | 18 | 18 |  |
| Age (Mean) | 21 | 26 |  |
| Black | 32 | 29 |  |
| White | 1 | 1 |  |
| Asian | 62 | 43 |  |
| Hispanic | 51 | 59 |  |
| Females |  |  |  |
| Economically Disadvantaged |  |  |  |

Limitations of this analysis. Students who took the survey but provided inaccurate information on, or chose not to sign, their consent form were excluded from this analysis. Additionally, researchers deleted students who attended alternative schools, as indicated by administrative data. Since Leander provided only administrative data for consenters and Del Valle provided no administrative data, no comparison between survey takers and the non-survey takers took place for these districts, and so results in the table above exclude them.

## Category Construction

Several variables not directly asked of students on their survey were used in grouping students in various categories; these constructed variables used one or more survey question(s) to
derive the category. For example, rather than use all of the potential answers to the student's high school as separate categories, students were grouped as either being enrolled in a school with more than $40 \%$ of students signed up for the free and reduced lunch program, or in a school with a population under $40 \%$ accepting these services. The sole category derived from more than one question deserves more discussion: whether the student was the first generation to go to college.

First Generation. First-generation college student refers to those students whose parents never attended college. This question was not asked directly of students; in the surveys administered by the Data Center, students were asked the education level of both their parents so this variable could be derived. Austin ISD's survey asked only about the mother's educational achievement, not the father's. However, students who indicated they were going to college were asked if they were the first in their immediate family to do so. This question poses a problem in attempting to identify first-generation college students: one, only students who intend to go to college answered the question and two, students whose older sibling(s) attended college but whose parents had never attended college would answer 'no' to the question, even though they would also be considered a first-generation student.

Researchers explored two alternative computations to determine first-generation college students in Austin ISD. Students who answered that they intended to go to postsecondary education and that they were the first in their immediate family to do so were categorized as first generation; students who indicated they were not going on to postsecondary education were categorized as first generation based on the educational attainment of their mothers. Using this definition, $35 \%$ of students in Austin were classified as being first generation. Since there are some students who, as mentioned earlier, have siblings with some college experience, the figure above probably under-estimates the number of first-generation students.

An alternate computation involved using the mother's education level as the proxy for first generation for all Austin ISD students. This produced a figure of $37 \%$ of students in Austin being classified as first generation. Since this computation addressed parental education directly, and was consistent across all students rather than across the subset of students who intended to pursue postsecondary education, it was adopted for this analysis.

Efforts to include the father's education level in the Austin survey or to replace their current question asking if the student was the first in his or her immediate family proved futile in
2006. Additional analyses of how best to computationally define first generation using current survey questions from both the Data Center and the AISD surveys, and what benefits and impediments the computations provide, will be examined using survey data from the class of 2007.

Single Parent. Since only the Data Center survey asked about the composition of the student's family during high school, this constructed variable was not included in the above discussion. If students replied that they had lived with either their mother or their father, but not both, then they were classified as coming from a single-parent family. Of those students who responded to this question $(1,553)$, their demographic make-up is as follows: $36 \%$ of low-income students reported being from a single parent household, while $17 \%$ of non-low-income students reported the same. Furthermore, $38 \%$ of Blacks, $21 \%$ of Hispanics, $9 \%$ of Asians, and $19 \%$ of Whites reported being in a single-parent household.

## Appendix B: High School Graduate Data Center Student Survey

## Instructions:

- Please take the 6-Digit Alpha-Numeric Code from the upper left hand corner of your consent form and (1) write it into the Identification boxes on your answer sheet and (2) fill in the appropriate bubbles below. Start at the left-hand side of the identification number boxes.
- Do NOT fill in any other identifying information on your answer sheet. (name, birth date, etc.) The ONLY information that should be filled in on the answer sheet is your ID number and your answers to the following questions.
- Please note that this survey contains questions on both the FRONT of each page and the BACK of each page.

## SELF AND FAMILY BACKGROUND

1. What is your gender?
(A) Female
(B) Male
2. What is your race/ethnicity?
(A) African American
(D) Asian or Pacific Islander
(B) Hispanic, Latino, of Spanish Origin
(E) White or Caucasian
(C) American Indian, Eskimo, or Aleut
3. Was your father born in the United States?
(A)Yes
(B) No
4. Was your mother born in the United States?
(A) Yes
(B) No
5. Were you born in the United States?
(A) Yes
(B) No
6. How many siblings do you have?
(A) 0
(B) 1
(C) 2
(D) 3
(E) 4 or more
7. Have any of your older siblings graduated from high school? (Choose only one answer)
(A) Yes
(B) No
(C) I am the oldest child
8. Have any of your older siblings attended or are currently enrolled in college? (Choose only one answer)
(A) Yes
(B) No
(C) I am the oldest child
9. Have any of your older siblings graduated from college? (Choose only one answer)
(A) Yes
(B) No
(C) I am the oldest child

10 . Who lives in your current household? (Bubble in all that apply.)
(A) Mother/step-mother
(B) Father/step-father
(C) Grandparent(s)
(D) Aunt
(E) Uncle
(F) Sibling(s)
11. What is the highest education level completed by your mother?
(A) Not a high school graduate
(F) Associate's degree
(B) High school graduate
(G) Bachelor's degree
(C) Less than 2 years vocational/technical
(H) Master's or Professional degree (e.g., law or medical degree)
(D) 2 or more years vocational/technical
(I) Doctoral degree (e.g. Ph.D., Ed.D.)
(E) Less than 2 years college
(J) Don’t know
12. Which of the categories below best describes the type of job your mother had for most of the time you were in high school?
(A) Did not work in a paid job
(B) CLERICAL such as bank teller, bookkeeper, secretary, typist, mail carrier, ticket agent
(C) CRAFTSMAN such as baker, automobile mechanic, machinist, painter. plumber, telephone installer, carpenter
(D) FARMER, FARM MANAGER
(E) LABORER such as construction worker, car washer, sanitary worker, farm laborer
(F) MANAGER, ADMINISTRATOR such as sales manager, office manager, school administrator, buyer, restaurant manager, government official
(G) MILITARY such as career officer, enlisted man or woman in the Armed Forces
(H) OPERATIVE such as meat cutter, assembler, machine operator, welder, taxicab, bus, or truck driver
(I) PROFESSIONAL such as accountant, artist, registered nurse, engineer, librarian, writer, social worker, actor, actress, athlete, politician, clergyman, dentist, physician, lawyer, scientist, college teacher, but not including school teacher
(J) None of the Above (Fill this in and go to the next question)
13. (Continued from 12) Which of the categories below best describes the type of job your mother had for most of the time you were in high school?
(A) If you chose any answer on question 12 other than option ( $J$, then fill this in and go on to the next question.
(B) PROPRIETOR OR OWNER such as owner of a small business, contractor, restaurant owner
(C) PROTECTIVE SERVICE such as detective, police officer or guard, sheriff, fire fighter
(D) SALES such as salesperson, advertising or insurance agent, real estate broker
(E) SCHOOL TEACHER such as elementary or secondary
(F) SERVICE such as barber, beautician, practical nurse, private household worker, janitor, waiter
(G) TECHNICAL such as draftsman, medical or dental technician, computer programmer
(H) Don't know
14. What is the highest education level completed by your father?
(A) Not a high school graduate
(F) Associate's degree
(B) High school graduate
(G) Bachelor's degree
(C) Less than 2 years vocational/technical
(H) Master's or Professional degree (e.g., law or medical degree)
(D) 2 or more years vocational/technical
(I) Doctoral degree (e.g. Ph.D., Ed.D.)
(E) Less than 2 years college
(J) Don't know
15. Which of the categories below best describes the type of job your father had for most of the time you were in high school?
(A) Did not work in a paid job
(B) CLERICAL such as bank teller, bookkeeper, secretary, typist, mail carrier, ticket agent
(C) CRAFTSMAN such as baker, automobile mechanic, machinist, painter. plumber, telephone installer, carpenter
(D) FARMER, FARM MANAGER
(E) LABORER such as construction worker, car washer, sanitary worker, farm laborer
(F) MANAGER, ADMINISTRATOR such as sales manager, office manager, school administrator, buyer, restaurant manager, government official
(G) MILITARY such as career officer, enlisted man or woman in the Armed Forces
(H) OPERATIVE such as meat cutter, assembler, machine operator, welder, taxicab, bus, or truck driver
(I) PROFESSIONAL such as accountant, artist, registered nurse, engineer, librarian, writer, social worker, actor, actress, athlete, politician, clergyman, dentist, physician, lawyer, scientist, college teacher, but not including school teacher
(J) None of the Above (Fill this in and go to the next question)
16. (Continued from 15) Which of the categories below best describes the type of job your father had for most of the time you were in high school?
(A) If you chose any answer on question 15 other than option (J), then fill this in and go on to the next question.
(B) PROPRIETOR OR OWNER such as owner of a small business, contractor, restaurant owner

AND PROTECTIVE SERVICE such as detective, police officer or guard, sheriff, fire fighter
(D) SALES such as salesperson, advertising or insurance agent, real estate broker
(E) SCHOOL TEACHER such as elementary or secondary
(F) SERVICE such as barber, beautician, practical nurse, private household worker, janitor, waiter
(G) TECHNICAL such as draftsman, medical or dental technician, computer programmer
(H) Don't know
17. What was the approximate yearly average income of your family while you were in high school?
(A) $\$ 25,000$ or less
(D) $\$ 90,000$ to $\$ 160,000$
(B) $\$ 25,000$ to $\$ 50,000$
(E) $\$ 160,000$ or greater
(C) $\$ 50,000$ to $\$ 90,000$
18. Over the last four years, how would you describe your overall relationship with your parents?
(A) Very good
(B) Good
(C) So-so
(D) Bad
(E) Very bad
19. How involved are/were your parents in your education.
(A) Very active
(B) Active
(C) Not very active
(D) Not at all active
20. To what extent did your parents encourage you to pursue further education or training after high school?
(A) A great deal
(B) Somewhat
(C) Not very much
(D) Not at all
21. To what extent did other family members besides your parents encourage you to pursue further education or training after high school?
(A) A great deal
(B) Somewhat
(C) Not very much
(D) Not at all
22. Thinking back, at what time in your life did you start thinking about college as a possibility after high school?
(A) As long as I can remember
(B) When I was a child
(C) In middle/junior high school
(D) In high school
(E) I've never thought about college as an option after high school
23. Before your senior year, did you expect to go to college?
(A) Mostly yes
(C) Not sure
(B) Mostly no
(D) Had not thought about it

In regard to decisions that you make about your life, please rank each of the following in terms of importance, with 1 being the most important and 9 being the least. (For each question use each ranking ONLY once...so if you respond to Question 24 as being the MOST important (1) then you should not use that number on any of the other questions in this section)
24. What my parents/grandparents think
25. What other adults (besides family) think
26. What my siblings think
27. What my teachers suggest
28. What my friends think
29. Experiences I've had in life
30. Data/information I collect
31. My religion's teachings
32. My own beliefs and ideas
33. Do you regularly attend a religious institution or youth group?
(A) Yes
(B) No
34. Are you eligible to vote?
(A) Yes
(B) No
35. Have you registered to vote? (Choose only one answer)
(A) Yes
(B) No
(C) I am not eligible to vote
36. Have you voted in any school board, city, county, state, or national election? (Choose only one answer)
(A) Yes
(B) No
(C) I am not eligible to vote

## HIGH SCHOOL EXPERIENCE

37. Did you participate in any extra-curricular activities (not school courses, but affiliated with your school) while in high school? (If yes, Bubble-In all that apply.)
(A) No (If not, fill in the first bubble on this answer (\#37) and the LAST bubble on the next question (\#38)
(B) Yes (Fill in this bubble and all those that apply below)
(C) Music (Chorus, Band, Orchestra, etc.)
(D) Theater/Drama
(E) Dance
(F) Sports
(G) UIL Academic Competitions (e.g., Number Sense, Spelling, Prose, Poetry, One Act Play, etc.)
(H) Journalism (Newspaper, Yearbook, etc.)
(I) Speech/Debate
(J) Language Clubs
38. (Question 37 Continued) (Bubble-In all that apply-if you answered No on the previous question, then fill in the last bubble ( J ) on this question and go to the next question)
(A) Political Clubs
(B) Academic Clubs (e.g., Science Olympiad, math team, Quiz Bowl, Youth in Government)
(C) Service Clubs (National Honor Society, PALS, Key Club, etc.)
39. Did you participate in any of the following activities outside of school during your senior year? (If yes, BubbleIn all that apply.)
(A) No
(B) Yes (Continue and Bubble-In all that apply)
(C) Organized sports activities (not related to school)
(D) Arts/Music/Performance activities (not related to school)
(E) Community service activities, including volunteering (e.g., hospitals, nursing homes, museums, libraries, food drives)
(F) Environmental projects/activities (e.g., recycling, clean-up campaigns, tree planting)
(G) Faith-based or charitable organizations
(H) Other organizations (e.g., Boy/Girl Scouts, Red Cross, Special Olympics)
(I) Helping my family by providing routine care for family members
(J) Work
40. On average, during your senior year, approximately how many hours per week did you spend studying, doing research, or completing homework assignments outside of class?
(A) None. I never worked on schoolwork outside of class.
(B) 1-5 hours per week
(D) 11-15 hours per week
(C) 6-10 hours per week
(E) 16 or more hours per week
41. Did you work while in high school?
(A) Yes
(B) No
42. Did your paycheck/wages contribute toward paying household expenses? (Choose only one answer)
(A) Yes
(B) No
(C) I did not work while in High School
43. During your senior year, approximately how many hours per week were you/have you been working?
(A) I did not work during my senior year
(B) 1-5 hours per week
(D) 11-15 hours per week
(C) 6-10 hours per week
(E) 16 or more hours per week
44. During your senior year, did you or anybody in your household participate in any of the following? (If yes, Bubble-In all that apply.)
(A) No (Fill in this bubble and then go on to question 45)
(B) Yes (Fill in this bubble AND all of the bubble that apply to you in this question)
(C) Free or reduced price meal program
(D) TANF
(E) Food stamps/Lone Star card

How well did your high school help you to further develop knowledge and skills in each of the following areas?
45. Writing
(A) Very well (B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
46. Mathematics
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
47. Science
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
48. Social Studies
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
49. Computer/Technology
(A) Very well (B) Well
50 . Foreign Language
(C) Somewhat well
(D) Not very well
(E) Not at all well
(A) Very well (B) Wel
(C) Somewhat well
(D) Not very well
(E) Not at all well
51. Performing/Fine Arts
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
52. Teamwork
(A) Very well (B) Well
53. Creative thinking
$\begin{array}{llll}\text { (A) Very well } & \text { (B) Well } & \text { (C) Somewhat well } & \text { (D) Not very well }\end{array}$ (E) Not at all well
54. Problem solving
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
55. Conflict resolution
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
56. Personal Health/Fitness
$\begin{array}{llll}\text { (A) Very well } & \text { (B) Well } & \text { (C) Somewhat well } & \text { (D) Not very well }\end{array}$ (E) Not at all well
57. Did you take any Career and Technology Education/Vocational Courses while in high school?
(A) Yes
(B) No
58. How will the skills that you learned in the Career and Technology/Vocational courses prepare you for work or further schooling in those areas?
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
(F) I did not take these courses

## 59. Did you ever meet with your school counselor?

(A) No (Did not meet)
(B) Yes (Fill in this bubble and all those that apply below)
(C) In class
(D) Outside of class
(E) Individually
60. How well did your counselor(s) advise you in planning your high school course selection?
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
(F) I never saw my counselor
61. How helpful were the meetings with your school counselor?
(A) Very Helpful
(B) Helpful
(C) Somewhat helpful (D) Not very helpful (E) counselor
62. For which of the following issues did you meet with a school counselor? (Bubble-In all that apply.)
(A) I did not meet with my school counselor
(B) Scheduling
(C) Building Resumes and College Essays
(D) Course Selection and Placement
(E) Financial Aid Information/Application
(F) Poor grades/academic performance
(G) Scholarship Information/Application
(H) Standardized tests [SAT, ACT, etc.]
(I) Conflict Resolution
(J) Graduation Plans
63. (Continued from 62) For which of the following issues did you meet with a school counselor? (Bubble-In all that apply.)
(A) I did not meet with my school counselor
(B) Personal and/or Family Issues
(C) 4 Year Plan
(D) Parent Conference
(E) Graduation Credit Verification
(F) Teacher Conference
(G) Testing Interpretation
(H) Career Information
(I) College Information/Applications
64. On the whole, I liked high school.
(A) Strongly Agree
(B) Agree
(C) Neutral
(D) Disagree
(E) Strongly disagree
65. If I had to do it again, I would do pretty much the same things in high school as I did before.
(A) Strongly Agree
(B) Agree
(C) Neutral
(D) Disagree
(E) Strongly disagree

## PLANS FOR AFTER HIGH SCHOOL

66. How well did your high school staff prepare you to meet your college and career goals?
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
67. How well prepared are/were you to apply to college (whether or not you applied)?
(A) Very well (B) Well
(C) Somewhat well
(D) Not very well (E) Not at all well

Whether or not you applied, how helpful were your high school staff (teachers, counselor, college counselor) with the following processes?
68. College Search/Selection Process
(A) N/A - did not meet
$\begin{array}{lll}\text { (B) Very helpful } & \text { (C) Somewhat helpful } & \text { (D) Not very helpful } \\ \text { (E) Not at all helpful }\end{array}$
69. Admissions Process
(A) N/A - did not meet
$\begin{array}{lll}\text { (B) Very helpful } & \text { (C) Somewhat helpful (D) Not very helpful (E) Not at all helpful }\end{array}$
70. Financial Aid Process
(A) N/A - did not meet
$\begin{array}{lll}\text { (B) Very helpful } & \text { (C) Somewhat helpful } & \text { (D) Not very helpful (E) Not at all helpful }\end{array}$
71. Scholarship Process
(A) N/A - did not meet
$\begin{array}{lll}\text { (B) Very helpful } & \text { (C) Somewhat helpful } & \text { (D) Not very helpful (E) Not at all helpful }\end{array}$
72. To prepare for college, did you attend Go Center events?
(A) Yes
(B) No
73. How helpful were Go Center events in your preparation for college?
(A) Very helpful
(D) Not very helpful
(B) Helpful
(E) Not at all helpful
(C) Somewhat Helpful
(F) I did not attend Go Center events
74. Regardless of whether or not you applied, in which college preparation activities did you participate? (Bubble-In all that apply.)
(A) Took one or more Advanced Placement or International Baccalaureate classes
(B) Visited one or more college campuses
(C) Completed the Distinguished Achievement Program (DAP)
(D) Completed the Recommended High School Plan
(E) Completed and submitted a financial aid form (FAFSA)
(F) Completed and submitted a scholarship application
(G) Took the PSAT examination
(H) Took college entrance tests (ACT, SAT, SATII, THEA)
(I) Met with my College Counselor (if different from regular school counselor)
(J) Met with my school counselor
75. (Continued from 74) Regardless of whether or not you applied, in which college preparation activities did you participate? (Bubble-In all that apply)
(A) Completed application to Austin Community College (ACC)
(B) Completed ACC courses (Early College Start, Dual Credit, Tech Prep)
(C) Ordered and submitted a transcript to a postsecondary institution
(D) Only those items on question 63 applied to my situation
76. Did you submit any applications for college or training after high school?
(A) Yes
(B) No
77. Where have you submitted applications for college or training after high school? (Bubble-In all that apply.)
(A) 2-year college
(B) 4-year college
(C) Business, technical (trade), or vocational school
(D) I have not submitted applications for college or training after high school
78. Where have you been accepted for college or technical training? (Bubble-In all that apply.)
(A) 2-year college
(B) 4-year college
(C) Business, technical (trade), or vocational school
(D) I have not submitted applications for college or training after high school

## 79. Do you have a declared major program or field of study?

(A) Yes
(B) No
(C) I have not submitted applications for college or training after high school
80. Who helped you the most in preparing you to apply to college?
(A) School Counselors
(B) College Counselor (if different from regular school counselor)
(C) Teachers
(D) College Recruiters
(E) Parents/Family/Relatives
(F) Friends or peers
(G) Adult mentor (outside my family)
(H) My own independent research
(I) Financial Institution (Credit Union or Bank)
(J) I did not apply to college
81. How well informed are/were you about obtaining financial aid for college or postsecondary education (whether or not you applied)?
(A) Very well
(B) Well
(C) Somewhat well
(D) Not very well
(E) Not at all well
82. Who helped you the most in obtaining financial aid information for college or postsecondary education (whether or not you applied)?
(A) School Counselors
(B) College Counselor (if different from regular school counselor)
(C) Teachers
(D) College Recruiters
(E) Parents/Family/Relatives
(F) Friends or peers
(G) Adult mentor (outside my family)
(H) My own independent research
83. Did you/family/your parents attend a college or financial aid event on or off your high school campus?
(A) Yes
(B) No
(C) Don't know
84. Did you apply for any types of financial aid? (If yes, Bubble-In all that apply.)
(A) No (Go to the next question after filling this in)
(B) Yes (Fill in all that apply below)
(C) Non-institutional loan only (e.g. Federal Stafford, Access Loan, A-DEAL, etc.)
(D) Institutional loans
(E) Scholarships
(F) Grants
(G) Work Study
85. Describe how easy to understand the process of financial aid was for you and your parents.
(A) Very easy
(B) Easy
(C) Somewhat easy, somewhat difficult
(D) Difficult
(E) Very difficult.
(F) We did not apply for financial aid
86. Will you or your family be borrowing any money for college?
(A) Yes, Definitely
(B) Yes, Probably
(C) Probably Not
(D) Definitely Not (Because we will be paying for it ourselves)
(E) Definitely Not (Because I will not be attending college or training)
(F) Maybe
87. Within a year after graduating from high school, what do you plan to do? (Bubble-In all that apply.)
(A) Go to college or technical school
(B) Be a full-time parent
(C) Go to work full-time
(D) Go into the military
(E) Go to work part-time
(F) I have no specific plans yet
(G) Travel
88. How do you plan to further your education?
(A) I DON'T intend on furthering my education.
(B) Attend a college or university for a postsecondary degree.
(C) Attend a school or college for a business, technical, trade or vocational certificate/certification.
89. If you are not planning to pursue further education or training at this time, do you intend to pursue it at a later time?
(A) I DO intend on furthering my education or training immediately after high school.
(B) Yes, Definitely
(E) Probably Not
(C) Yes, Probably
(F) Definitely Not
(D) Maybe
(G) Don't Know
90. If you are not planning to pursue college at this time, what are your primary reasons? (Bubble-In all that apply.)
(A) Cannot afford to attend school (E) Don't feel academically prepared for college
(B) Childcare responsibilities
(F) Need income from working
(C) Don't like attending school
(G) My career goals do not require college education
(D) Grades/test scores aren't high enough
(H) I DO intend to pursue college at this time
91. When are you planning on graduating?
(A) May 2006
(B) Summer 2006
(C) Fall 2007
(D) Later than Fall 2007
(E) I am not planning on graduating from High School?

Thank you for participating in this survey. Your responses will help your school district improve its instruction and other activities to help prepare students for their college and career goals

[^0]:    ${ }^{1}$ Low-income families are those that participate in the Food Stamp, TANF or free/reduced-price school meal programs. Children from these families will be referred to in this report as low-income students.
    ${ }^{2}$ First-generation students are defined, for all non-AISD districts, as those that reported that neither of their parents had completed any education beyond high school. AISD's survey asked students for their mothers' education level only.
    ${ }^{3}$ Low-income schools are defined as those in which at least $40 \%$ of students come from low-income families. In all but one of these schools, over half of the students meet this definition.

[^1]:    ${ }^{4}$ This count only includes those school districts whose headquarters are located in one of these counties.

[^2]:    ${ }^{5}$ First-generation students were not identified due to a lack of available school-wide data.

[^3]:    ${ }^{6}$ A pilot survey of Central Texas seniors was conducted in the summer of 2005 to develop and test the survey approach and questions.

[^4]:    ${ }^{7}$ Researchers only received the data needed to compare survey respondents to all seniors in four of the six school districts -Austin, Manor, Pflugerville and Round Rock.

[^5]:    ${ }^{8}$ For Austin ISD, only mother's educational level was available.
    ${ }^{9}$ Due to a low response rate in Del Valle ISD, results from that district were not included in the analysis of differences across districts or in Appendix C results.

[^6]:    ${ }^{10}$ Schexnayder et al, 2007.

[^7]:    ${ }^{11}$ Variables upon which the two groups were compared are: age, gender, race/ethnicity and low-income status. Leander ISD was excluded from this analysis because the Data Center only received this information for 2006 seniors who provided student consent.
    ${ }^{12}$ The threshold of statistical significance discussed in this portion of the text is less than 5\%. Additional results are presented in Appendix A.

[^8]:    ${ }^{13}$ Researchers in the AISD Department of Program Evaluation, who had access to a special education variable not available to Data Center researchers, conducted an analysis verifying this portrayal of survey nonrespondents.

[^9]:    ${ }^{14}$ Sets the rules for all statewide academic and athletic competitions for Texas schools.

[^10]:    ${ }^{15}$ Information on other types of financial aid for which students applied (e.g., scholarships, grants, etc.) was only available for non-AISD students so those will not be discussed in this report.

[^11]:    ${ }^{16}$ For districts outside of Austin ISD, this linking used information provided on each student's consent form, while in Austin ISD, a scrambled identification number provided by the district linked the survey to their administrative data.
