Introduction

The future of the United States is critically tied to the success of the education of children in Texas. While accounting for only 15.7 percent of growth in the total population in the United States between 2000 and 2010, Texas accounted for an equivalent of 53.2 percent of the growth in the early childhood and school age population (ages 0-12)[1] alone [an increase of 732,166 children or a 17.2 percent change between 2000 and 2010 (see Table 1)]. This growth is more than the combined growth in the early childhood and school age populations for Georgia, North Carolina, and Florida [ranked second through fourth in growth for this age group (see Table 2)]. By 2010, 9.3 percent of the early childhood and school age population in the United States resided in Texas. Only California had more children in this age group (at 12.3 percent of the U.S. population ages 0 through 12). In the 2000 to 2010 decade, Texas added more people, including those in the early childhood and school ages, than any other state (4.3 million people and 732,166 children) and experienced the fifth largest percentage growth in the total and early childhood and school age population of any state in the nation [a change of 20.6 and 17.2 percent, respectively (see Tables 2 and 3)].

Texas' shift to a more racially and ethnically diverse population was even more dramatic. The population changed from a Non-Hispanic White-majority population in 2000 to one with no racial/ethnic majority in 2010. These racial and ethnic changes were especially apparent in the early childhood and school age population. By 2010, Hispanics accounted for approximately half (49.3 percent) of this age group (from 41.6 percent in 2000). This diversification in racial and ethnic characteristics is occurring as a result of not only growth in Hispanic, Non-Hispanic Black, Non-Hispanic Asian and Other children, but as a result of decline in the number of Non-Hispanic White children. By 2010, there were 121,002 fewer Non-Hispanic White children in this age group than lived in Texas in 2000 while all other race/ethnic groups experienced population increases in their early childhood and school age populations (see Table 4).

[1] For this report, the early childhood and school age population is defined as the population between the ages 0 through 12, inclusive. The population in these ages account for the majority of the demand for early childhood and out-of school time care. In addition these are the ages in which the cost of care can be reimbursed for Child Care Development Fund (CCDF) services. For ease of description, on occasion we use the term children or childhood population to refer to this specific age group.

Source: U.S. Census 2000 and 2010 S.F. 1, 2015 Early Childhood Population Projections

Section 1: Projected Growth in the Early Childhood and School Age Population in Texas

In the first section of this report, we summarize the demographic changes that occurred in the previous decade for the early childhood and school age population and the changes that are expected to occur in the immediate future (2011-2015). The early childhood and school age population include children from birth through and including age 12. Children in this age group form the bulk of the demand for early childhood and after-school care.

Overall, the State of Texas will see continued increases in demand for early childhood education and after school services as a result of population growth. However, the State's population growth from 2000 to 2010 varied widely from one region of the state to another. Some regions have experienced population declines in this age group during the 2000-2010 decade and others are likely to suffer from declines in this age group in the future.

In order to understand changes occurring in different regions of the state, we provide summaries of demographic changes by different regional configurations. First, a regional overview is provided using councils of government (COG) regions as our reference geography. However, since most of the population is concentrated in metropolitan areas and because much of the growth in this age group will continue to occur in major metropolitan areas, we also examine change in the childhood population in metropolitan areas. Finally, we examine demographic changes in the early childhood and school age population by analyzing changes occurring within counties. We limit our discussion to highlighting those counties with substantial changes over the two periods (2000-2010 and 2010-2015) and provide a series of maps to delineate the geographical extent of these changes. In addition to this section summarizing geographic changes at the state level, we provide extensive data for council of government regions (COGs), Metropolitan Statistical Areas (MSAs), and counties. .

After discussing the methods used to project the under 13 population we provide an overview of the projected changes in the early childhood and school age population in the State of Texas. In the second section, we provide an overview of changes by selected socioeconomic characteristics of the early childhood and school age population and their families.

Methodology

The data provided on the early childhood and school age population in this report were derived from the 2000 and the 2010 Census for all periods from 2000-2010. For periods after 2010, that is for 2011-2040, projections were made of the early childhood and school age population based on a modified cohort-component projection model. These projections were prepared using procedures devised by the senior author and others at the Office of the State Demographer when the senior author was the Director of the State Data Center and State Demographer of Texas.

The procedure used was a modified cohort-component projection model which requires preparing projections of the number of births, the number of deaths and net migration for the population by age, sex, and race/ethnicity for the projection period (2011-2040) for the early childhood and school age population. This was done using age, sex, and race/ethnicity specific rates of fertility, mortality and migration. Baseline rates for fertility were developed based on births for 2007-2010 and survival rates based on comparisons of 2000 and 2010 cohorts were used to measure mortality. These projections assume that the trends in the age, sex and race/ethnicity net migration rates of 2000-2010 will characterize those occurring in the future in Texas. For Texas, this was a decade of high population growth (i.e. 20.6% for the 2000-2010 decade for the State). For counties that experienced net outmigration during the 2000 to 2010 period, this scenario produces continued decline. A description of the general cohort-components methodology used in these projections can be found at the Texas State Data Center website and in reports being published by the Hobby Center for the Study of Texas at Rice University (2009).

Change in the Early Childhood and School Age Population in the State of Texas 2000-2010 and Projected to 2015

In 2010, nearly five million children, ages 0-12, were living in Texas, an increase of 732,166 over the previous decade [(17.2 percent growth) see Table 1 and Appendix A]. Much of that growth occurred during the early part of the 2000-2010 decade. The economic downturn beginning in 2008 impacted migration and augmented the trend of declining birth rates for Non-Hispanic Whites, African Americans, and Asian and Others. The later part of this decade also suggested an approximately six percent decline in Hispanic birth rates.

We expect these fertility trends for Non-Hispanic Whites, African Americans and Others to continue since they have been showing relatively continuous patterns of decline beginning in

the previous decade but we are less certain of the extent to which Hispanic rates will continue to decline since they have only recently shown decline and the period of such decline coincided with the last few years (2008-2011) of the economic downturn in Texas and the United States. Nevertheless, the clear patterns of decline in the later part of the 2000-2010 decade (when incorporated into our projections for the childhood population for 2010 to 2015) result in a projected change of 6.1 percent between 2010 and 2015 (a five year increase of 303,072 children). This value for five years is 82 percent of the five year growth level for 2000-2010. We believe this is a reasonable rate of decline given the levels of historic change and economic related effects of the past several years and the likely extension of some of these for the near-term (i.e., 2010-2015).

It is important to recognize that even if Texas experiences slower numerical and slower rates of growth from 2010 to 2015 than from 2000 to 2010 growth in the child population is still dramatic relative to other areas in the nation. Thus an examination of the data in Table 2 indicates that Texas' increase of 303,072 children for the five year period from 2010 to 2015 is larger than the numerical increase that occurred in any other state in the United States from 2000 to 2010. Texas' projected lower level of growth is still relatively extensive.

Texas has experienced substantial levels of demographic change in its racial/ethnic characteristics over the past fifty years. The Non-Hispanic White childhood population continues to decline with simultaneous increases in the Hispanic childhood population (see Table 4). In 2000, Non-Hispanic Whites and Hispanics accounted for 84 percent of the total early childhood and school age population in Texas. This percentage remained virtually unchanged in 2010 but while Non-Hispanic Whites accounted for a plurality of the early childhood and school age population in 2000 (at 42.3 percent), by 2010, Hispanics were the dominant race/ethnic group (at 49.3 percent). If the projections presented here occur, in 2015 the majority of early childhood and school age children will be Hispanic (50.2 percent), while only 31.8 percent will be Non-Hispanic White.

Between 2000 and 2010, the Non-Hispanic White early childhood and school age population decreased by over 121,000. Between 2010 and 2015, the Non-Hispanic White childhood population will increase only slightly, by 36,967 from 1,646,728 in 2010 (a 2.2 percentage increase). The Hispanic early childhood and school age population increased the most during the 2000 to 2010 decade, from 1.8 million in 2000 to 2.5 million in 2010 (an increase of 690,021 or 38.9 percent). Due to declines in migration and a decline in birthrates,

Hispanics will experience a much slower pace of growth from 2010 to 2015 (increasing by 8.0 percent to 2.7 million in 2015).

In percentage terms, the fastest growing group was the Non-Hispanic Asian/Other population which increased by 60.9 percent from 2000 to 2010. Although the total number in this group is relatively small compared to other race/ethnic groups (i.e., Non-Hispanic Whites and Hispanics), by 2015, this group is projected to increase to 358,333 (from 193,483 in 2000 and 311,330 in 2010). This is a 15.1 percent increase in a five year period.

As a result of having an age structure similar to Non-Hispanic Whites as well as declining rates of fertility, the Non-Hispanic Black population saw the second slowest population growth of any of the race/ethnic groups except Non-Hispanic Whites (45,300 or 8.6 percent from 2000 to 2010). It is projected that they will experience a small increase between 2010 and 2015 of 21,000 children (or a 3.7 percentage increase). The share of the early childhood and school age population that is Non-Hispanic Black is projected to decline from 11.5 percent in 2010 to 11.2 percent in 2015.

Change in the Distribution of the Early Childhood and School Age Population in the State of Texas, 2000-2010 and Projected to 2015

Councils of Governments

The patterns of change in the early childhood and school age population in councils of government regions (see Appendix A) follow those of the overall population. The most rapid growth from 2000 to 2010 occurred in the South Texas border area and in the Texas Triangle – the end points of which include Houston, Dallas-Ft. Worth, and San Antonio (see Table 5). All of the Councils of Government planning regions that experienced faster growth than the State's increase in the under 13 population of 17.2 percent are located within these areas. They include the Alamo Area with an increase of 17.9 percent, the Capital Area with an increase of 37.2 percent, the Central Texas region with an increase of 20.7 percent, Houston-Galveston with an increase of 20.7 percent, the Lower Rio Grande Valley with an increase of 26.0 percent, the North Central Texas region with an increase of 21.0 percent, and South Texas with an increase of 17.6 percent. At the same time, six of the twenty-four Councils of Government regions experienced declines in the early childhood and school age population (see Table 5). These regions have smaller metropolitan areas and larger percentages of rural population than that found in the growing regions.

Table 5: Early Childhood and School Age Population in 2000, 2010, and Projected for 2015 and Numeric and Percent Change, 2000-2010 and 2010-2015 by Councils of Government Planning Regions

Source: U.S. Census 2000 and 2010, Summary File 1 and 2015 Preliminary Projections

Between 2010 and 2015, the fastest growth in the early childhood and school age populations is expected to occur in the Brazos Valley (16.3 percent), Capital Area (13.5 percent), Central Texas (11.1 percent), Permian Basin (7.4 percent), Houston-Galveston (7.2 percent), and the North Central Texas (5.9 percent) planning regions.

Between 2000 and 2010, 60.4 percent of the State's growth in the early childhood and school age population occurred in the Houston-Galveston and North Central Texas planning regions. Growth in the childhood population will continue to be dominated by these two regions – with 55.0 percent of the State's 2010-2015 growth occurring in these two regions alone and another 15.2 percent of the growth in the childhood population occurring in the Capital Area planning region. By 2015, 51.4 percent of the total early childhood and school age population will reside in the Houston-Galveston and North Central Texas planning regions (an increase from 49.6 percent in 2000).

Metropolitan Areas

As shown in Table 6 (also see Appendix B) the Texas early childhood and school age population is increasingly concentrated in metropolitan areas.[2] In 2010, approximately 89.6 percent of the early childhood and school age population was located in metropolitan areas (compared to 87.4 percent in 2000). Of the 732,166 children added in this age group from 2000 to 2010, 726,364 (99.2 percent of all children added to this population) were located in metropolitan areas (see Table 6). In the aggregate, most of the 303,072 increase in the early childhood and school age population from 2010 to 2015 is projected to occur in metropolitan areas with only about 20,000 children added to non-metropolitan areas.

Many metropolitan areas have not experienced growth in the early childhood and school age population. Metropolitan areas with losses in the early childhood population between 2000 and 2010 included: Abilene (a loss of 390 children), Beaumont-Port Arthur (a loss of 3,839 children), Corpus Christi (a loss of 2,402 children), Victoria (a loss of 954 children), and Wichita Falls (a loss of 1,870 children). Between 2000 and 2010, the majority of the growth in the early childhood and school age population occurred in the Dallas-Ft. Worth-Arlington and Houston-Sugar Land-Baytown Metropolitan Statistical Areas (MSAs). The MSAs with childhood

[2] For our analysis, we use the definitions of the metropolitan statistical areas as they were defined by the Office of Management and Budget in 2009 (i.e. the definitions used in the 2010 Census).

Table 6: Early Childhood and School Age Population in 2000, 2010, and Projected for 2015 and Numeric and Percent Change, 2000-2010 and 2010-2015 by Metropolitan Statistical Area (MSA)

Source: U.S. Census 2000 and 2010, Summary File 1 and 2015 Preliminary Projections

population growth greater than the statewide rate of growth of 17.2 percent from 2000 to 2010 are located within the Texas Triangle or in the South Texas border area (see Table 6).

Projections to 2015 indicate continued growth in early childhood and school age populations in the Dallas-Ft. Worth-Arlington and Houston-Sugar Land-Baytown MSAs (an addition of more than 162,000 children in the two MSAs combined). Between 2010 and 2015, eight metropolitan areas are projected to have greater percentage growth than the State's growth of 6.1 percent. These MSAs include: College Station-Bryan (20.9 percent), Austin-Round Rock-San Marcos (14.2 percent), Killeen-Temple-Fort Hood (12.1 percent), Odessa (8.0 percent), Midland (7.4 percent), Abilene (7.2 percent), Longview (7.2 percent), and Houston-Sugar Land-Baytown (7.1 percent), Killeen-Temple-Fort Hood (12.1 percent), Longview (7.2 percent), Midland (7.4 percent), Odessa (8.0 percent), and Tyler (5.8 percent). At the same time, four metropolitan areas are expected to experience population declines in this age group. These MSAs include: Brownsville-Harlingen (-0.4 percent), Sherman-Denison (-0.6 percent), Corpus Christi (-0.8), and Texarkana (-1.6 percent).

Counties

Over time, the proportion of the population in the early childhood and school ages has decreased. In 2000, four of 254 Texas counties had 25 percent or more of their total populations in this age group and 20 counties had less than 15 percent of the population in this age group (see Figure 1 and Appendix C). By 2010, these numbers changed to 4 and 44, respectively, and the 2015 projections presented here estimate that in only two counties will these proportions be 25 percent of the total population or more and 62 counties will have 15 percent or less of their population in these early childhood and school ages (see Figures 2-3).

Between 2000 and 2010, 38 counties experienced growth in the early childhood and school age population that was equal to or greater than the state growth of 17.2 percent (see Figure 4). These counties were primarily located in the major metropolitan areas of the state (Austin-Round Rock-San Marcos; Brownsville-Harlingen; Dallas-Ft. Worth-Arlington; Houston-Sugarland-Baytown; Laredo; San Antonio-New Braunfels; and Killeen-Temple-Fort Hood). In addition, several rural counties stand-out as having experienced significant growth in their early childhood and school age populations, including Franklin in East Texas, Bailey, Kent, Gaines, Yoakum, and Schleicher Counties in West Texas, and four additional counties in the upper Panhandle (Ochiltree, Roberts, Hemphill, and Hartley Counties). During the 2000 to 2010 decade, the early childhood and school age population in Harris County grew by over 117,669,

followed by Tarrant County (72,409) Collin County (57,449) and Bexar County (50,454) (see Table 7)). Of the top ten counties with the largest numeric growth in the early childhood and school age population (adding 28,000 or more children), all were located in the Texas Triangle or in the Lower Rio Grande Valley.

Over fifty percent of the State's early childhood and school age population will live in the six counties with the largest projected childhood population in 2015 (Harris, Dallas, Tarrant, Bexar, Travis and Hidalgo Counties). The counties with the largest early childhood and school age population are projected to be located in the Texas Triangle with the exception of Hidalgo and El Paso County (see Table 8). Between 2010 and 2015, growth in this population will slow in most counties. Between 2010 and 2015, Bexar and El Paso Counties are projected to have much smaller numeric change in their early childhood and school age populations primarily because of the projected slowing of growth in Hispanic populations. The ranking of the counties in terms of numeric growth between 2010 and 2015 are shown in Table 9. Overall, 62 counties are projected to have rates of growth in the early childhood and school age population that are the same as, or greater than, the State as a whole (6.1 percent) between 2010 and 2015 (see Figure 5).

Texas counties are experiencing substantial change in their racial/ethnic makeups. Figures 6 through 13 depict change in each of the major race/ethnic groups for the early childhood and school age population compared to state change in that same racial/ethnic group for 2000-2010 and 2010-2015. Figure 6 shows change in the Non-Hispanic White early childhood and school age population for the previous decade. Of the 254 counties in Texas, 202 experienced declines in the Non-Hispanic White early childhood and school age populations during the 2000-2010 decade. Counties that experienced growth were primarily suburban counties in the Houston-Sugar Land-Baytown and Dallas-Ft. Worth-Arlington MSAs; Central Texas Counties from Coryell and Bell down to the suburban counties of San Antonio; several counties in the Hill Country; several counties in East Texas in and around Tyler, and a few counties scattered throughout the state. Between 2010 and 2015, 108 counties are projected to experience declines in the Non-Hispanic White early childhood and school age population and only 131 will have no change or experience population growth (see Figure 7).

Significant growth has occurred in the Hispanic early childhood and school age population in the State as a whole. Much of that growth in the previous period occurred in major metropolitan areas and in counties throughout East Texas – an area with relatively small numbers of Hispanics at the beginning of the 2000-2010 decade (see Figure 8). What is evident from this map is the large change in the Hispanic population for this age group for many counties in East

Texas. In 2000, many of these counties had small Hispanic populations overall and, relative to counties in West and South Texas, the Hispanic populations for many of these counties will likely remain small.

However, early childhood education and after-school providers in these areas are experiencing and will continue to experience substantial changes in the race/ethnic characteristics of the populations that they serve. Overall, 105 counties experienced growth in the Hispanic early childhood and school age population that was greater than the State's growth of 38.9 percent. Counties losing Hispanic population in this age group are located in West and South Texas – areas which have had long histories of overall population decline. These trends will continue through 2015 (see Figure 9). Of those counties that are projected to see Hispanic early childhood and school age population growth greater than the state as a whole (8.0 percent), most are in East Texas and in the Dallas-Ft. Worth and Houston areas.

Figure 1: Early Childhood and School Age Population as a Percent of Total Population for Texas Counties, 2000

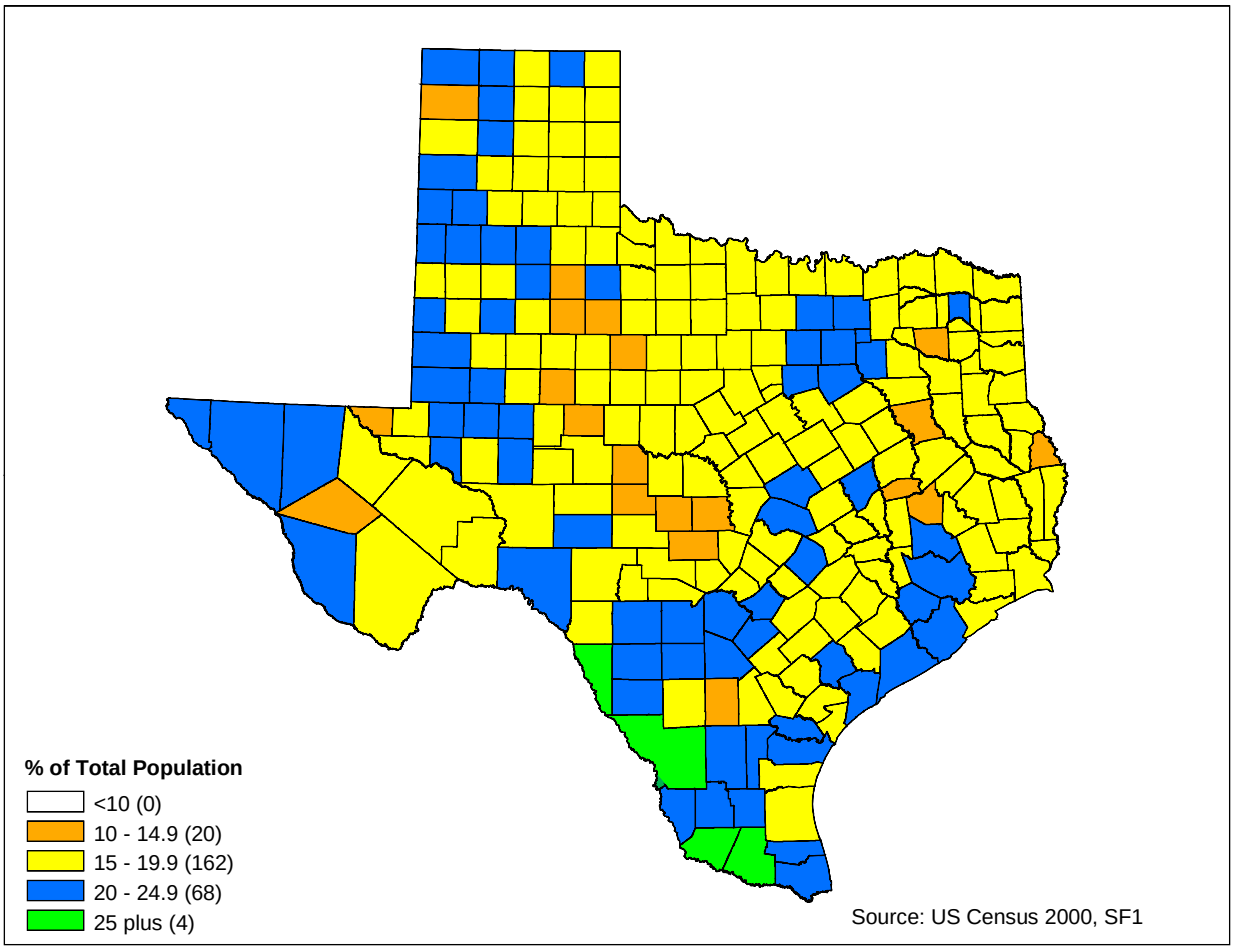

Figure 2: Early Childhood and School Age Population as a Percent of Total Population for Texas Counties, 2010

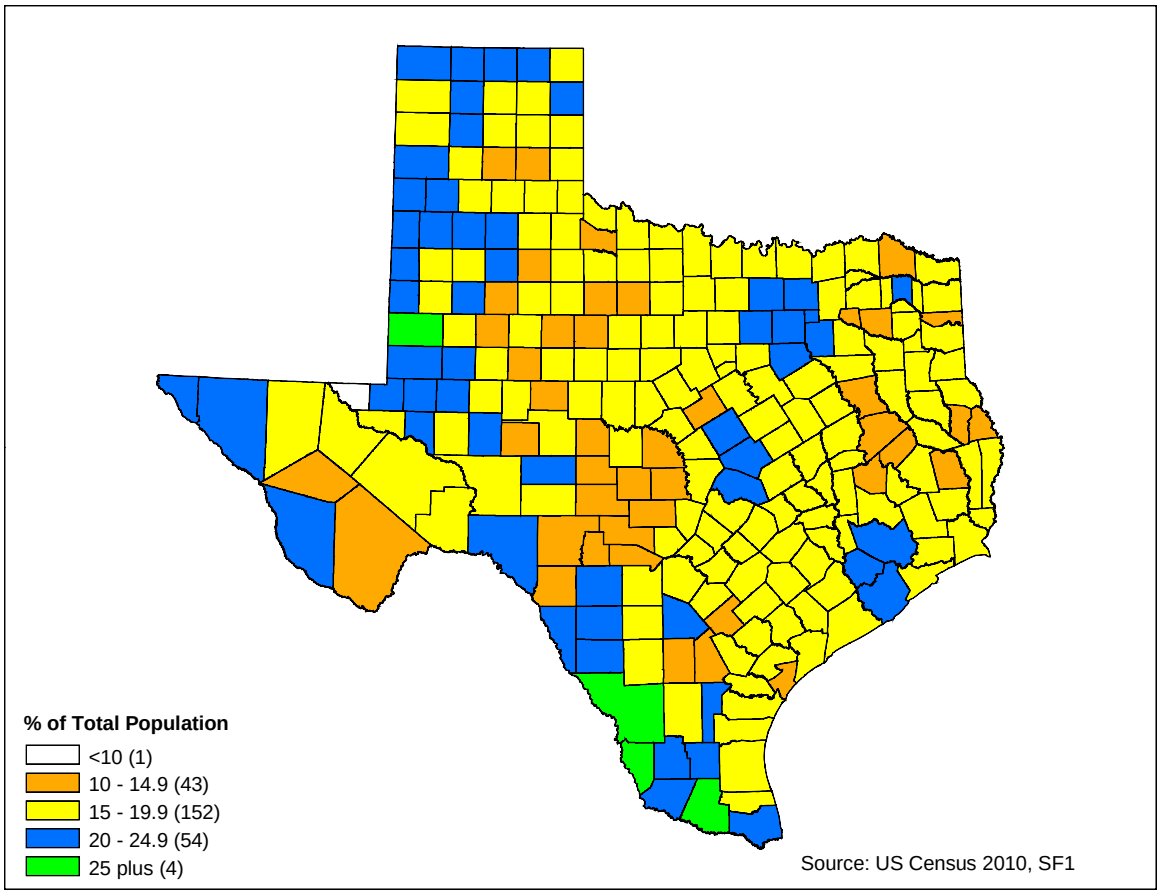

Figure 3: Early Childhood and School Age Population as a Percent of Total Population for Texas Counties, 2015

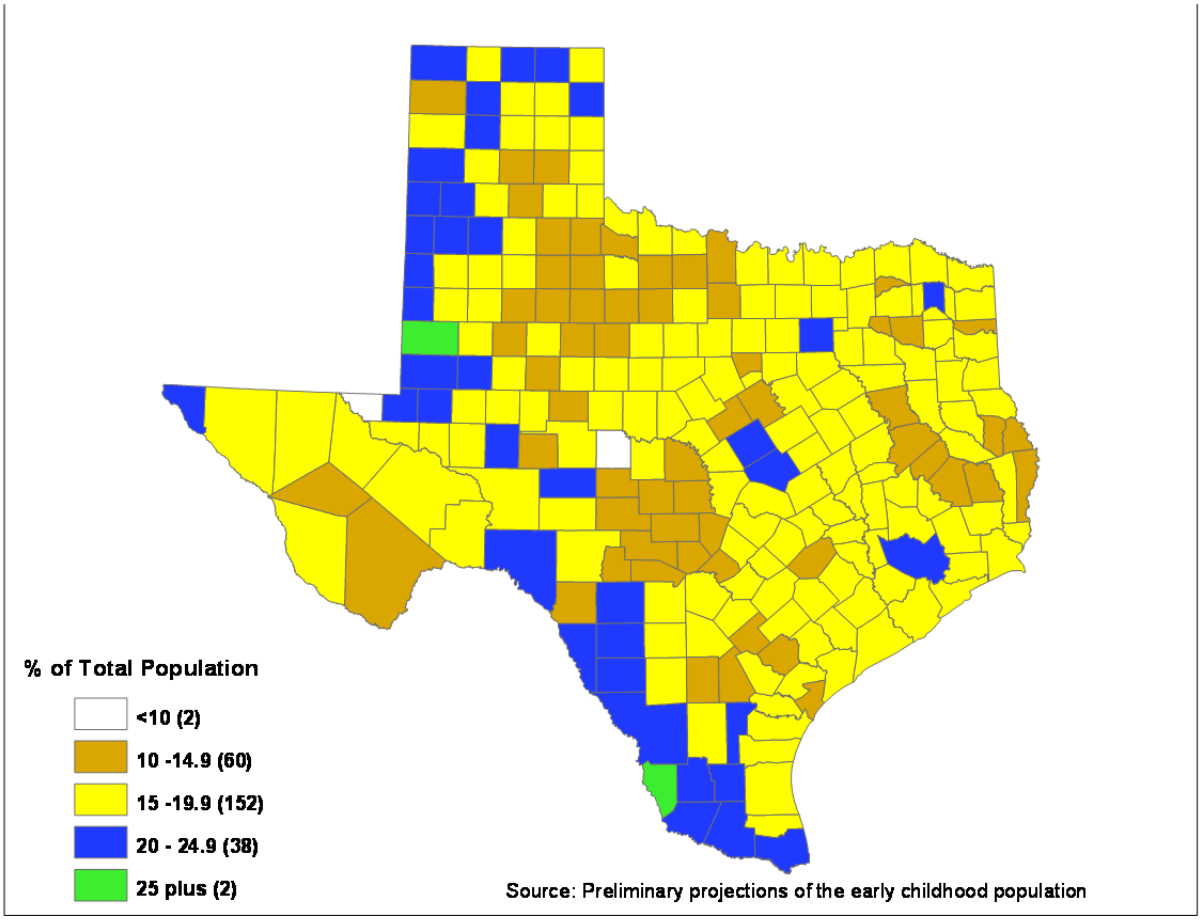

Figure 4: Percent Change in Early Childhood and School Age Population, 2000-2010

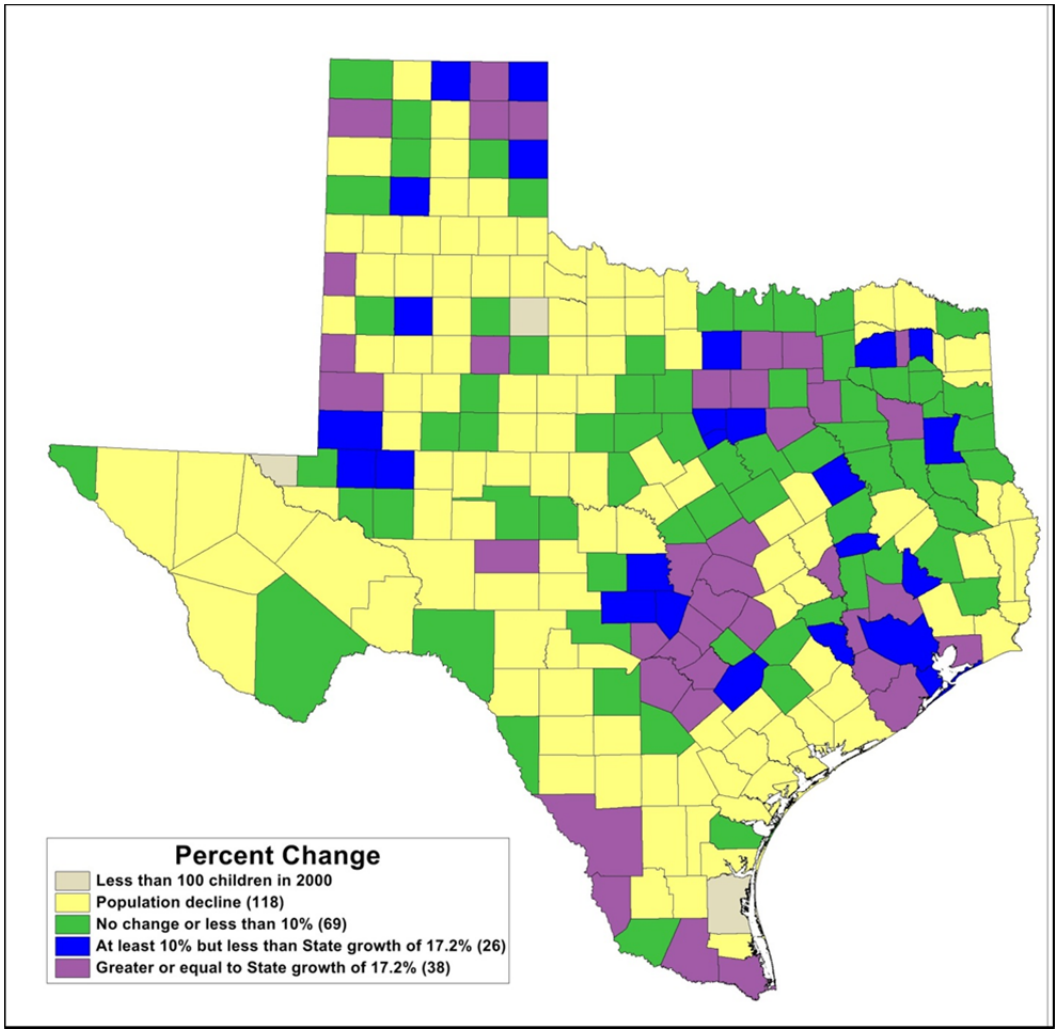

The largest concentration of the Non-Hispanic Black population remains in large metropolitan areas and in East Texas. The most substantial percentage growth in the Non-Hispanic Black early childhood and school age population from 2000 to 2010 occurred in mostly suburban counties of Dallas-Ft. Worth-Arlington, Houston-Sugar Land-Baytown, Austin-Round Rock-San Marcos, and San Antonio-New Braunfels (23 counties in all), and counties that experienced decline were located throughout East Texas. These trends will continue so that of the counties with at least 100 Non-Hispanic Black children ages 0 - 12 in 2010, approximately 61counties will experience growth or no change in this Non-Hispanic Black early childhood and school age population while 55 will experience population declines (Figures 10 and 11).

There are fewer counties with significantly large populations in the Non-Hispanic Asian and Other population. Of the counties with at least 100 Non-Hispanic Asian and Other children ages 0 – 12 in 2000, four counties experienced population decline for the group while 25 had growth greater than the state as a whole [(at 60.9 percent) see Figure 12]. For the State of Texas, this population group is expected to grow by 15.1 percent between 2010 and 2015 and 25 counties are expected to meet or exceed that growth rate (Figure 13).

Overall, then, the data for the State of Texas and its component council of government regions, metropolitan statistical areas, and counties show relatively rapid growth in the early childhood and school age population. Although we project a slower level and rate of growth in this population from 2000 to 2015 than occurred from 2000 to 2010, the growth is still substantial and may well challenge the State's human and other resources to meet the educational needs of this growing population group.

Section 2: Selected Socioeconomic Characteristics of the Early Childhood and School Age Population in Texas in 2010 and Projected to 2015

In the previous section, we presented a summary of the changes in the early childhood and school age population that have occurred in the past decade and are likely to occur in the near future for Texas as a whole and for its component areas. In this section, we provide a summary analysis of the changes in selected socioeconomic characteristics of the early childhood and school age population and their households, families, and parents for 2000 and 2010. In addition, we provide estimates of the children in poverty for 2010 and projected to 2015. The characteristics shown are those that are likely to be of particular importance in planning early childhood education and after-school care programs or related to some programmatic relationship or eligibility criteria for publicly-provided early childhood education and after-school care programs (such as Head Start/Early Head Start, State funded Public School Pre-K, and the Child Care Development Fund).

Methodology

Estimates for selected socioeconomic variables other than poverty were derived from the Integrated Public Use Microdata Sample for the 2000 U.S. Decennial Census and the 2010 American Community Survey [IPUMS (Ruggles et al. 2010)]. The IPUMS data used in the analysis of 2000 patterns are a five percent sample of individual de-identified records from the total records from the 2000 Census while the IPUMS was derived from the American Community Survey (ACS) sample for 2010. The sample from the ACS for 2010 is substantially smaller (about one-quarter of the size for an area of 100,000) than that used in the IPUMS for the 2000 Census and thus must be used with full recognition of the potential for higher levels of sampling error.[3]

For a variety of historical and other reasons, income differentials exist between racial and ethnic groups. The projections of poverty presented here assume that these differentials remain and thus the estimates of the number of children in poverty in 2010 and projected future years were derived by developing race/ethnicity and age specific rates of children in poverty by county

[3] The estimates of the early childhood population for 2000 and 2010 will vary slightly from the counts provided for 2000 and 2010 in the previous section. The estimates from the American Community Survey represent the average population present for the entire year compared to a count of the population on April 1, 2010 (the count is provided in Section 1).

from the 2006-2010 American Community Survey. The ACS data are limited by small sample size and larger sampling errors for areas of small childhood populations overall or for specific race/ethnic groups. As a result, statewide rates of children in poverty by race/ethnicity were used for counties where the margin of error for a particular group was larger than +/- 10% of the 2006-2010 estimates. This primarily impacted counties with total populations less than 25,000 or with small populations of a particular race/ethnic group. For areas larger than counties, estimates of the number of children ages 0-12 in poverty were summed from county estimates. As a result, percentages of children in poverty for councils of governments and metropolitan statistical areas will sometimes show small differences in poverty rates for areas that are the sum of counties (i.e. COGS and MSAs) as a result of rounding. While limited by sampling errors and the extent to which estimates for 2010 may not apply to 2015 (as a result of changes in the economy), these estimates and projections provide useful indications of the prevalence and change in the poverty population assuming continued population growth and limited economic changes from 2010 to 2015.

Socioeconomic Characteristics of Households with Children 0-12 Years of Age State-Level Characteristics

Living Arrangements

As shown in Table 10 the majority of the early childhood and school age children live in two parent households.[4] In 2010, an estimated 62.0 percent of all children ages 0 through 12 were living with two parents. However, the highest rates of growth have occurred in the number of children living with a single parent. Between 2000 and 2010, the number of children living with single parents increased by 53.2 percent (or 591,445 children) compared to a 4.9 percent change in the number of children ages 0-12 living with both parents (a change of 146,490 children). In 2010, an estimated 34.0 percent of all children ages 0-12 in Texas were living with a single parent (27.1 percent were living with a single mother). The average household and family size and number of siblings living with these young children has remained virtually unchanged. An estimated 4.1 percent of Texas' early childhood and school age population was not living with either parent in 2010. These children could be living in a residential care facility, living with other relatives, or living with foster or grandparents.

[4] Dual parent households include any households where both parents (including stepparents) are present.

Employment Characteristics of Parents

The majority of early childhood and school age children live with working parents (see Table 10). Approximately 29.7 percent of all children ages 0-12 lived with two working parents, with another 29.8 percent living with two parents with only one parent working. There were more children living with single parents who were not working in 2010 than the number of children living with two parents who were not working (either not employed or not in the labor force). An estimated 1.6 percent of the early childhood and school age population was living with at least one parent who was in the Armed Forces in 2010.

Total	**4,247,102**	**5,012,949**	**765,847**	**18.0**	**100.0**	**100.0**

Foreign Born, Citizenship, and Language

The number of foreign born young children in Texas (see Table 10) declined slightly, from 238,000 in 2000 to an estimated 208,000 in 2010 (a decline of 30,381 children). Only about four percent of all children ages 0-12 were foreign born in 2010. Language and cultural barriers can challenge the ability to provide early childhood education and after-school care services. Children (citizens and non-citizens) in this age group may be living in households where English is not spoken and/or live with parents who are not citizens. In 2010, 17 percent of children ages 0-12 lived with either both parents who were not citizens or lived with a single parent who was not a citizen. The overwhelming majority of the early childhood and school age age population lived with at least one parent who was a citizen (78.8 percent). Between 2000 and 2010 there was an increase in the number of children ages 0-12 living in households where all members 14 years old and older had at least some difficulty speaking English.[5] This number increased by an estimated 175,990 or 35.8 percent between 2000 and 2010 (to 668,080 in 2010). An estimated 13.3 percent of the early childhood and school age age population lived in linguistically isolated households in 2010.

Population in Poverty

An estimated 24.9 percent of the early childhood and school age population was living in poverty households in 2010 (see Table 11). Assuming that rates of poverty by race/ethnicity and age remain the same, 1.3 million children will be living in households in poverty in 2015 (an increase of roughly 99,000 children).

Councils of Governments

Table 12 shows the results of applying poverty levels from the 2006-2010 ACS to the estimated 2015 population ages 0-12. The largest numerical increases in the number of children in poverty from 2010 to 2015 would occur in the Houston-Galveston, followed by the North Central Texas, Capital and Alamo Area COGS.

[5] According to U.S. Census definitions, a linguistically isolated household is one in which no one 14 years or older speaks English at least "very well."

Metropolitan Statistical Areas

Table 13 provides poverty-related data for the Metropolitan Statistical Areas in Texas. As expected the largest number of children in poverty in 2015 would be in Dallas-Fort Worth-Arlington MSA; the Houston-Sugar Land-Baytown MSA; the San Antonio-New Braunfels MSA, the Austin-Round Rock-San Marcos MSA, and the McAllen-Edinburgh-Mission MSA.

Counties

Table 14 shows estimates of the number of persons in poverty for the ten counties in Texas with the largest projected early childhood and school age population in 2015. These show rates of poverty ranging from 22.2 to 50.1 percent.

Summary of Socioeconomic Characteristics

The summary of socioeconomic characteristics provided above clearly shows that the early childhood and school age population is likely to face a number of challenges related to their socioeconomic characteristics. As a result not only will the number of such children increase between now and 2015 but the number of such children with language, poverty and other challenges will also increase.

Report Summary

The data in this report show that the early childhood and school age population increased in the 2000 to 2010 decade in the United States as a whole but the increase in the Texas early childhood and school age population was particularly large with Texas accounting for 53.2 percent of the increase in the childhood population in the Nation from 2000 to 2010. Texas increase of 732,166 children less than 13 years of age represented a 17.2 percent increase in the State's early childhood and early school age population and substantially increased the demand for early childhood and after-school programs. The projections provided here for 2000 to 2015 suggest that the level of increase is expected to slow in the post-2010 period with an expected 2000 to 2015 (five year) increase of 286,074 which is 41 percent of the (ten-year) level of growth of 2000-2010. This slower rate of growth reflects a decline in economic conditions in the later part of the 2000-2010 decade and the expectation that growth of the magnitude of that of the 2000-2010 decade is unlikely to be fully realized prior to 2015. However, even with this slowdown of growth the five-year increase of more than 303,072 would be greater than the ten year increase for any other state from 2000 to 2010. In sum, though reduced from the level of the 2000 to 2010 period the growth is expected to be extensive from 2010 to 2015.

The growth will continue to be dominated by growth in minority early childhood and school age populations particularly Hispanics with Hispanic children accounting for more than 65 percent of the increase in the childhood population from 2010 to 2015. Similarly, the projections suggest that this growth will also be concentrated in the council of government, metropolitan statistical areas and counties that have shown rapid growth in these populations in the past. Thus the Houston, Dallas, San Antonio, Austin, McAllen, and El Paso regions will continue to show the most rapid growth.

The growth will be accompanied by substantial increases in the number of early childhood and school age children who are culturally and linguistically isolated and impoverished. Although perhaps increasing somewhat more slowly than in the past decade, the challenge to providing such children with the resources they need to develop into fully competitive adults will continue for the State of Texas in the coming years.

Appendices Note

We provided a summary of the changes that have occurred in the immediate past (2000-2010) and will likely occur by 2015 for the early childhood and school age population in Texas in the main body of this report. These data are used for the gap analysis. In order to understand the long term changes in the demand for early childhood and after school programs, we also prepared long term projections of the early childhood and school age population (the population age 0 through 12). The following appendices provide more detailed historical counts of the early childhood and school age population (for 2000 and 2010), projections for the immediate future (2015), followed by the long-term projections of the 0 to 12 population (2020-2040) for Councils of Governments planning regions (Appendix A), metropolitan statistical areas (Appendix B), and counties (Appendix C). Data are provided for each race/ethnic group for each period and numeric and percentage population change for selected historical and projection periods. Data for the State of Texas are shown in each appendix. We provide a summary of these long term changes (2010-2040) here. Projections to 2015 were discussed in the main body of this report.

The patterns of change in the population as a whole and in the early childhood and school age population that have occurred in the recent past are expected to continue into the projection period, with much of the growth in Texas occurring in the Texas Triangle region. Between 2010 and 2040, approximately 3.1 million early childhood and school age children will be added to the Texas population (an increase of 61.1 percent from 2010). Approximately 63 percent of the growth in this population is expected to occur in the Houston-Galveston and North Central Texas planning areas, with another 13 percent of the growth located in the Capital Area planning region (see Appendix A). The fastest percentage growth between 2010 and 2040 will occur in the Capital Area (116.5 percent), North Central Texas (82.3 percent), Brazos Valley (69.7 percent), and Houston-Galveston (68.0 percent) planning regions.

The growth will continue to concentrate in metropolitan areas, with much of the growth in this population occurring in the Dallas-Fort Worth-Arlington, Houston-Sugarland-Baytown, and Austin-Round Rock-San Marcos MSAs (see Appendix B). Combined, these three metropolitan areas will account for 75 percent of the growth in the early childhood and school age population. By 2040, 55 percent of the early childhood and school age population will reside in the two largest MSAs (Dallas-Fort Worth-Arlington and Houston-Sugarland-Baytown) and 71 percent will reside in the four largest MSAs (which include, in addition to the previously mentioned MSAs, Austin-Round Rock-San Marcos and San Antonio-New Braunfels) – up from

50 and 65 percent in 2010, respectively. Whereas approximately eleven percent of this population lived in nonmetropolitan counties in 2010, by 2040, only eight percent will live in nonmetropolitan counties in 2040 (even with an increase of 144,968 children in non-metropolitan areas between 2010 and 2040).

Only 51 of the 254 Texas counties are expected to see declines in the early childhood and school age population (see Appendix C). The fastest growth in this population will occur in major suburban counties around Austin, Dallas-Fort Worth, and Houston. These include Hays (498.1 percent), Williamson (353.4 percent), Kaufman (303.5 percent), Montgomery (303.4 percent) and Denton (301.1 percent). By 2040, 1.2 million children ages 0-12 will live in Harris County. The next county with the largest early childhood and school age population in 2040 will be Tarrant (633,618), followed by Dallas (574,645), Collin (449,560), Bexar (446,908), Denton (376,579), Fort Bend (335,345), and Hidalgo (320,103). These extensive changes in the early childhood and school age population will require enhancement of early childhood and after school programs.
